Sean Messner, P.E.

Re Painted Hills Traffic Impact Analysis – Response to TIA Comments

Dear Sean

We have completed and revised the TIA per your letter dated October 2, 2015 and offer the following revisions and responses.

1. General: Analysis of the site access points should be included in the LOS tables with the study intersections. Please revise the report and include the access points proposed in the LOS tables with appropriate information.

All proposed and anticipated access roadways and driveways have been included and analyzed for LOS. Many of these access driveways were not defined at the time of the writing of the TIA as the development was still in the pre-design stage.

2. General: Include tum lane warrant analysis at site driveways and intersections that do not currently have tum lanes, based on WSDOT tum lane criteria.

Turn lanes are addressed in the year 2020 scenario section of the report.

3. General: Queue analysis at intersections and access points was requested but not included in report. Please revise report and provide accordingly.

The documentation of the TIA scope does not include a request for queue analysis. However in order to move the traffic study through the review process a queue analysis has been included within the study.

4. General: There was no discussion of provisions for pedestrians or bicyclists within the report. Provide accordingly.

A description of the pedestrian and bicycle facilities are included within the roadway descriptions.

5. General: Cut-through traffic was identified by the public. The executive summary and conclusions (one in the same) provide recommendations, however the report does not

contain any analysis or discussion of cut-through traffic via 40th/Woodlawn. The appendix provides data, please provide appropriate analysis and document accordingly.

As the cut through traffic comment was a request of the public the response to the public is included in that section. As this was a request made to WCE, we have provided the analysis that is appropriate to this request. In other words we are reporting the "news", not trying to create new "news"

6. General: Traffic counts should not be conducted during the weeks of holidays. This is common practice as weeks that contain holidays impact the travel patterns of many workers. This is well documented by FHWA, ITE, and included in many DOT data collection guidelines including WSDOT. Additionally, traffic counts shall not be conducted during weather events, including snowfall.
    a. Martin Luther King Jr. holiday was on Monday January 20th, 2015. Therefore traffic counts conducted during this week are invalid and shall be recounted. This includes the following intersections:
        i. 32nd / University
        ii. Dishman Mica / University
        iii. Dishman Mica / Bowdish
        iv. Dishman Mica / Thorpe
    b. The study also includes traffic counts performed for another project during the first week of July in 2014. These counts coincided with the July 4th holiday, which occurred that Friday. Therefore, traffic counts conducted during this week are invalid and shall be recounted. This includes the following intersections:
        i. 32nd / Evergreen (PM)
        ii. 32nd / Sullivan (PM)
        iii. 16th / Pines (PM)
        iv. 16th / SR 27 (PM)
        v. 32nd / SR 27 (PM)
    c. Lastly, snowfall occurred on January 22, 2015 with 2.1 inches in the region. Therefore, traffic counts on 1/22/ 15 are invalid and shall be recounted. This includes the following intersections:
        i. 32nd / Bowdish
        ii. 32nd / Pines
        iii. 32nd / SR 27 (AM)

The comment is noted and the counts have been redone in accordance with the City of Spokane Valley Street standards. These were provided to the City of Spokane on October 19th and 22nd 2015

7. General: Review of the executive summary, conclusions, and recommendations did not occur due to the comments provided herein. These will be reviewed upon resubmittal of the TlA with comments addressed.

So noted

8. General: Per our standards, the TIA shall analyze all access points proposed as part of the development. The TlA analyzes 5 access points: 1 to Dishman Mica and 4 to Madison. Based on this, the development shall only have 5 access points as described and analyzed within the TIA.

As per comment number 1 all proposed accesses have been included.

9. General: Include discussion of existing pedestrian and bicycle facilities in the study area.

A description of the pedestrian and bicycle facilities are included within the roadway descriptions.

10. General: Detailed reviews of the LOS calculations throughout the report were not performed based on the traffic count comment previously provided. The change in traffic volumes will impact the LOS throughout the report, and will be reviewed upon submission of a revised TlA addressing comments accordingly.

So noted

11. Page 8 - Multifamily Residential and Commercial: No access points to Dishman Mica were analyzed, and therefore are not permitted. Dishman Mica is classified as a Minor Arterial. As such, only I access is allowed per our Street Standards, Section 7.8.2, unless the additional access provides:
    a. Minimum spacing requirements between access points is met; and,
    b. The applicant demonstrates that additional access points will result in an improvement to safety or traffic flow both on-site and off-site; and,
    c. One of the following exist:
        i. The PM peak hour volume exceeds 100 peak hour vehicles on both directions, or
        ii. Traffic volumes using the driveway exceed the capacity of a stop controlled intersection during the peak hour, or
        iii. The ADT using the one access exceed 1,000 vehicles both directions.

The two commercial accesses to Dishman-Mica Road have been placed on the preliminary site plan since the submittal of the TIA and maintain a minimum of 120' CL to CL separation per Table 7.8. The two intersections were added to the level of service analysis in the "with project" scenarios. The Multi-Family Access has yet to be designed at this stage however a Right-in Right-out access on Dishman-Mica Road for the multifamily use has been included within the Study.

12. Page 8 - Project Access to Existing Transportation System: This description does not match the analyses provided nor have the proposed access points been approved. Revise accordingly.

The access description has been revised.

13. Page 10 - University Road: University Road has several cross-sections along its length. It also has bike lanes. Revise the report to reflect the conditions accordingly.

The road description has been revised

14. Page 11 - Bowdish Road: The portion of Bowdish Road that is classified as a minor arterial is 35 mph along its entirety. Revise the report accordingly.

The road description has been revised

15. Page 11- State Route 27: SR 27 is 4-5 lanes within the City of Spokane Valley. Revise accordingly.

The road description has been revised

16. Page 11 - 16th Avenue: 16th Avenue is a collector from Carnahan to Dickey (25 mph), a minor arterial between Dishman Mica and Sullivan (35 mph), and a local roadway east of Sullivan (25 mph). It's not a 3-lane roadway in the collector or local roadway areas. There are school zone beacons (20 mph) at McDonald Elementary and Evergreen Middle school. Bike lanes are also present. Revise accordingly.

It is a general practice to not include discontinuous sections of roadway that do not connect to the study area as their inclusion would confuse and distract the reader (i.e. general public) The road description has been revised to address the other comments

17. Page 11 – 32nd Avenue: Bike lanes are present. Revise accordingly.

The road description has been revised.

18. Page 11 - Pines Road: Pines is a 3-lane minor arterial between 16th & 32nd and a 2-lane collector south of 32nd School zone beacons (20 mph) are present at Pines Elementary. SR 27 extends from Trent to 32' d. Revise accordingly.

Please update the online Arterial map with that roadway classification. The road description has been revised.

19. Page 11- Evergreen Road: Evergreen is a 3-lane road from 4th to 16th and a 2-lane road from 16th to 32nd. Bike lanes are also present. Revise accordingly.

The road description has been revised

20. Page 12 - Sullivan Road: Bike lanes are present in certain sections. Revise accordingly.

The road description has been revised

21. Page 12 - Thorpe Road: Thorpe is a collector between Dishman Mica and Madison. Revise accordingly.

The road description has been revised

22. Page 12 – 32nd Avenue & University Road: Revise " ... east and westbound ... "

The road description has been revised

23. Page 13 - Madison Road & Thorpe Road: This is not a 4-way stop controlled intersection. There is one stop sign for the EB direction only. Revise accordingly.

The intersection description has been revised

24. Page 14 – 32nd Avenue & Evergreen Road: The southbound approach has a left-turn lane and a right turn lane. If SB through volumes are present, they likely align in the left-turn lane. Revise accordingly.

The intersection description has been revised

25. Page 16 - Traffic Volumes and Peak Hours of Operation: This study also included traffic counts from 2014. Please see previous comments regarding traffic counts.

The count description has been revised

26. Page 16 - Public Transit and School Bus Transportation: There are also bus stops on 32nd east of Pines. Revise accordingly.

The bus stop description has been revised

27. Page 17 - It should be noted that City staff requested the meeting be moved from a Council meeting night.

The notation was added per your request.

28. Page 19 - Turn lane discussion: Analysis was not completed at the time of the meeting, therefore the response of "Per this study, turn lanes on Dishman Mica Road and Madison Road are not included to allow level of service to dictate the need for a turn lane" was not the response given. Provide the analysis and documentation within this study. Please also note that LOS is not the only consideration for turn lanes, as there are turn lane warrants separate from LOS.

The comment has been removed as it no longer applies.

29. Page 20 - The responses on this sheet were not the original responses. Rather, the responses that are depicted should be incorporated into a section of the report providing the analysis that validates the recommendation. This is not provided and shall be included. Revise accordingly.

Please specify.

30. Page 21 - See Comment #29.

Please specify.

31. Page 22 - Pedestrian counts should be number of pedestrians, not the call for groups of pedestrians. Revise, document, and provide accordingly.

The statement has been revised to clarify how pedestrian counts are used.

32. Page 23 - Street lights: Provide street lighting design as part of the plans submitted to the City. Please note photometric analyses may also be required. Also, provide separate signing and marking plans for frontage improvements for review, including sight distance lines/measurements.

As you state street lighting is to be determined as a part of the plan submittal

33. Page 26 & 27 - LOS discussion: Include City of Spokane Valley as we have our own standards.

The description has been revised.

34. Figure 3 & 4: Signal timings were provided. The note "LOS based upon cycle and split optimization within Synchro 9" is not valid. Revise accordingly.

The old note has been removed.

35. Page 32 - Background Project Traffic: Please provide a table within body of report showing the added trips from background developments. The tables in the appendix are helpful, but providing one in the body aids in review and documentation.

A table has been provided in the document.

36. Page 36 - Table 5: No internal capture calculations are provided. Provide accordingly.

The internal capture calculations are now included in appendix

37. Page 37 - Table 7: No internal capture calculations are provided. Provide accordingly.

The internal capture calculations are now included in appendix

38. Page 37 - Table 8: One would expect internal capture from the mixed use portion. Provide internal capture calculations. Provide accordingly.

The internal capture calculations are now included in appendix

39. Page 38 - Table 9: No internal capture calculations are provided. Provide accordingly. Additionally, there is no pass-by reduction for the AM peak hour per the ITE handbook, Table 5.6. Revise pass-by trip reduction accordingly.

The internal capture calculations are now included in appendix. The AM pass –by Rate has been removed per your comment.

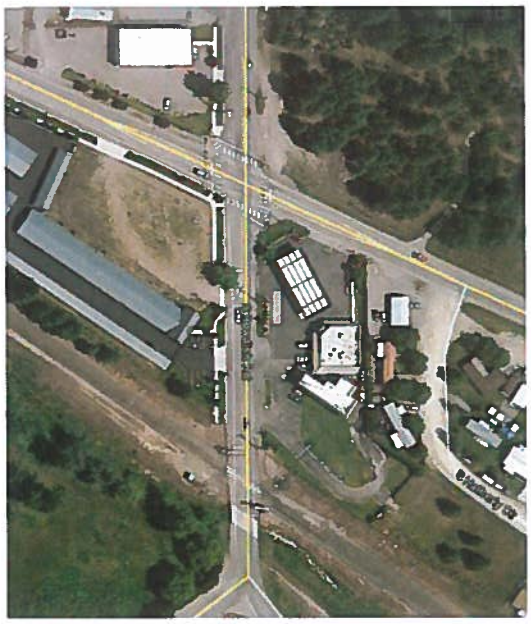
40. Page 39 - Table 11: Revise per comment #39.

Table 11 has been revised, as well as Tables 12 and 13

41. Page 39 - Table 12: The internal capture summary is incorrect. The summary double counts the internal capture, and shall be revised accordingly. Please refer to the ITE Trip Handbook for guidance on calculations of internal capture and the application of appropriate trip reductions.

The summary table reports the internal or shared trips from previous tables.

42. Page 40 - Trip distribution discussion: The residential distribution south on Bowdish/Sands should be zero percent. There are no attractions (employment or retail) that would attract residents to this street. Revise distribution at Dishman Mica / Bowdish accordingly.



The distribution has remained as shown in the photo, the Chester Store access and parking is located off Bowdish Road, and the Chester Self-Storage has its main access on Bowdish Road so it is reasonable that trips would follow existing patterns with 10% of trips turning left in the AM Peak Hour and 2% of trips turning left in the PM Peak Hour onto Bowdish Road and then into the driveway of the convenience store. By observation it is more common that trips complete this movement as the majority of

parking for the business is located on the Bowdish side and congestion at the pumps during peak hours will deter drivers from entering in on the Dishman-Mica side

43. Figure 9: Revise pass-by figure per comment #39.

The Figure has been revised.

44. Page 54: Future improvements may require proportionate share of costs from the Painted Hills development.

The project is willing to mitigate any intersection level of service discrepancies identified in the year 2020 buildout year as discussed, but will not mitigate a supposed impact 25 years in the future.

If you have any questions or comments in regard to this letter please feel free to contact us at (509) 893-2617.

Thank You

For

Todd R. Whipple, P.E.

TRAFFIC IMPACT ANALYSIS

Painted Hills PRD

Spokane Valley, Washington

December 23, 2015

2013-1166

Prepared by:

Whipple Consulting Engineers, Inc.
2528 N. Sullivan Road
Spokane Valley, WA 99216
(509) 893-2617

This report has been prepared by the staff of Whipple Consulting Engineers, Inc. under the direction of the undersigned professional engineer whose seal and signature appears hereon.

Todd R. Whipple, P.E.

TABLE OF CONTENTS

LIST OF FIGURES

LIST OF TABLES

TECHNICAL APPENDIX

EXECUTIVE SUMMARY

This Traffic Impact analysis has been prepared to supplement the SEPA process for the proposed Painted Hills planned residential development (PRD) the following traffic impact analysis has been completed and includes the following land uses: 52 Cottage Style Single Family Lots, 206 Single Family Residential Lots, 42 Estate Type Single Family Lots, 228 Apartment Units, a commercial development and a mixed use commercial/residential development.

1. The City of Spokane Valley and the Washington State Department of Transportation (WSDOT) have established Level of Service (LOS) D as the minimum acceptable level of service at signalized intersections and level of service E at unsignalized intersections within the study area.

2. The project proposes to develop 99.7 acres +/- into the following: 52 Cottage Style Single Family Lots, 206 Single Family Residential Lots, 42 Estate Type Single Family Lots, 228 Apartment Units, and a commercial development complex, which is anticipated to include a total of 26,400 SF of commercial buildings with 52 apartment units located above the retail space in the mixed use.

3. The project site lies within the SE ¼ of Section 33, T25N R44E W.M., within the City of Spokane Valley, Washington. And is located north of Thorpe Road, east of Dishman-Mica Road, and west of Madison Road. A vicinity map is included as Figure 1.

4. The project site is currently listed on the comprehensive plan and zoned Residential 3. The parcels to be developed by the project are 45336.9191, 44041.9144, 45334.9135, 45334.0110, 45334.0109, 45334.0108, 45334.0114, 45334.0113, and 45334.0106. Please see Figure 2, Site Plan.

5. The project study area intersections were identified through a neighborhood traffic scoping meeting and discussions with the City of Spokane Valley, the Washington State Department of Transportation (WSDOT), and Spokane County. The study encompasses twelve existing intersections and five proposed intersections.

    - 32nd Ave & University Rd (AM & PM)
    - Dishman-Mica Rd & University/Schafer Rd (AM & PM)
    - 32nd Ave & Bowdish Rd (AM & PM)
    - Dishman-Mica Rd & Bowdish Rd (AM & PM)
    - Dishman-Mica Rd & Apt. Access (AM & PM) (Proposed)
    - Dishman-Mica Rd & Sundown Dr. (AM & PM) (Proposed)
    - Dishman-Mica Rd & N. Comm. Access (AM & PM) (Proposed)
    - Dishman-Mica Rd & S. Comm. Access (AM & PM) (Proposed)
    - Dishman-Mica Rd & Thorpe Rd (AM & PM)
    - Thorpe Rd & Comm. Access (AM & PM) (Proposed)
    - 16th Ave & Pines Rd (AM & PM)
    - 16th Ave & SR 27 (AM & PM)
    - 32nd Ave & Pines Rd (AM & PM)
    - Madison Rd & Painted Hills Ave (AM & PM) (Proposed)

- Madison Rd & 41st Ave (AM & PM) (Proposed)
- Madison Rd & 43rd Ave (AM & PM) (Proposed)
- Madison Rd & 44th Ave (AM & PM) (Proposed)
- Madison Rd & Thorpe Rd (AM & PM)
- 32nd Ave & SR 27 (AM & PM)
- 32nd Ave & Evergreen Rd (AM & PM)
- 32nd Ave & Sullivan Rd (AM & PM)

6. This traffic impact analysis utilizes level of service analysis for the year 2015 (existing) to establish a baseline of performance and identify any existing concerns in the exiting transportation system. Future year scenarios were completed for the buildout year (2020) both without the project and also with the project. These scenarios are used to determine traffic concurrency or to determine if the added trips of the project on the transportation system would reduce the scoped intersections level of service below the standard. Finally, the horizon year (buildout year + 20 years) scenarios were completed at the request of City of Spokane Valley to provide a planning level analysis of the scoped intersections. An Additional analysis of Peak Hours and cut-through traffic per public comment were included in the public involvement section to respond to a concern that the Midilome East residents had.

7. Conclusion

Based upon the analysis, field observations, assumptions, methodologies and results which are provided in the body of this report, it is concluded that the development of the proposed project will generate new trips on the existing transportation system and that those trips while affecting level of service will generally not degrade LOS below concurrency levels, except at the intersection of 16th Avenue & Pines Road. Additionally the queue deficiencies identified carry through the scenarios from the existing condition to the future conditions, and the project only adds to an already existing condition. This conclusion was reached and has been documented within the body of this report.

Existing Condition

- There are no Level of Service deficiencies identified for level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- There are three queue deficiencies identified at three of the scoped intersections that have acceptable levels of service, there is no public improvement project identified to mitigate these discrepancies.

Year 2020, without project, with background projects

- There are no Level of Service deficiencies caused by the background projects and growth rate, for level of service as understand Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- There are five queue deficiencies identified at three intersections with acceptable levels of service. These deficiencies were identified as the result of the background growth rate and the background projects as identified at scoping. There is no public improvement

project identified to mitigate these discrepancies. Please see the analysis for the details of the found discrepancies.

Year 2020, with project, with background projects

- There is a Level of Service deficiency identified at the intersection of 16th Avenue & Pines Road, for level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- The Level of Service deficiency identified at the intersection of 16th Avenue & Pines Road, originally caused by the background trips and worsened by this project, can be brought back to an acceptable level of service by removing the southbound approach to the intersection and redirecting trips through the SB right turn movement of the intersection of 16th Avenue & State Route 27, This project proposes to remedy this anticipated deficiency.
- There are the same five queue deficiencies previously identified at three intersections with two of those intersections operating at acceptable levels of service. These deficiencies were the result of the background growth rate and the background projects as identified within this study and are only incrementally worsened or kept the same by this project. There is no public improvement project identified to mitigate these discrepancies. Please see the analysis for the details of the found discrepancies.

Horizon Year 2040, without project, with background projects (Planning Level)

- There are planning level, Levels of Service deficiencies identified at the intersections of; 16th Avenue & Pines Road, for level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- The Level of Service deficiency at the intersection of 16th Avenue & Pines Road can be improved by the agencies considering a public improvement project that would redefine the layout of the closely spaced intersections. We have included for the agency consideration, a plan that utilizes a roundabout and a traffic circle.
- There are seven queue deficiencies identified. These are the extensions of known queue deficiencies or are the results of deficiencies in Levels of Service.

Horizon Year 2040, with project, with background projects (Planning Level)

- There are planning level, Levels of Service deficiencies identified at the intersections of 16th Avenue & Pines Road, for level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- As previously stated the Level of Service deficiency at the intersection of 16th Avenue & Pines Road can be improved by the agencies considering a public improvement project that would redefine the layout of the closely spaced intersections. We have included for the agency consideration, a plan that utilizes a roundabout and a traffic circle.
- There are queue deficiencies identified. These are the extensions of known queue deficiencies or are the results of deficiencies in Levels of Service.

8. Recommendations

Based upon the conclusions within this study the proposed project is recommended to provide frontage improvements to Dishman-Mica Road, Thorpe Road, and Madison Road per the City of Spokane Valley development process and add a two-way-left-turn-lane north of the Chester Creek Bridge to the property boundary. We also recommend that when warranted prior to buildout that the project removes the southbound approach to the intersection of 16th Avenue & Pines Road.

At this time we are not making any turn lane proposals at the intersection of 32nd Avenue & Pines Road due to extenuating circumstances associated with traffic operations of the signal and University High School and student safety in the area.

Introduction, Purpose of Report and Study Area

This traffic impact analysis is required by the City of Spokane Valley as part of the traffic concurrency and SEPA process for the proposed Painted Hills planned residential development (PRD). The proposed development includes 52 Cottage Style Single Family Lots, 206 Single Family Residential Lots, 42 Estate Type Single Family Lots, 228 Apartment Units, and a commercial development and a mixed use commercial/residential development (4.26 ± ac), with a total of 99.7 acres +/- . Please see Figure 1-Vicinity Map and Figure 2-Preliminary Site Plan.

The purpose of this analysis is to review, assess, and identify the potential traffic related impacts that the proposed project may have on the transportation network and where possible minimize any impact. This TIA will be completed in accordance with the current traffic guidelines from the City of Spokane Valley, Washington State Department of Transportation (WSDOT), Spokane County, and the Institute of Transportation Engineers (A Recommended Practice – Traffic Access and Impact Studies for Site Development, 2010).

Site Location and Development Description

The proposed development is located on approximately 99.7 acres +/-. The site was previously a privately held golf course open to the public. The site is proposed to be separated into six (6) different land uses within the PRD. A description of each proposed land use is provided below.

Cottages Style Single Family (Townhouses)
The 52 "Cottage Style Single Family Lots" are intended to be a combination of cottage style homes and common wall buildings or townhouses within a gated community, which is located at the north end of the project site. The lots are accessed by a single gated access from Madison Road to the east that runs east/west, and also a gated emergency fire access road at the west end that leads into the Single Family Residential development.

Single Family Residential
The 206 Single Family Residential lot development lies in the middle of the site, and also makes up a majority of the site in land area, besides the open space. It has three main accesses: two from Madison Road to the east and one from Dishman-Mica Road to the west. The development has two north/south internal roads, as well as 5 east/west internal roads each with a traffic circle in the middle to provide traffic calming throughout the development.

Estate Type Single Family (Large Lot Single Family Residential)
The 42 Estate Type Single Family lots are large, single family residential lots located at the south end of the project site. There is a single gated access road from Madison Road to the east that runs east/west. The Estate Type Single Family also has an internal loop road that makes a rectangular loop off the proposed main road. There is also a gated emergency fire access road at the northwest corner that runs north into the southern traffic circle of the Single Family Residential development.

Multi-Family Residential

The 228 unit apartment complex is located at the northwest end of the project site. There may be two accesses for this development: one to/from Dishman-Mica Road to the west, via a new alignment out to Wilbur Road, and one to/from an internal project road located to the south. As apartment complexes differ in design, the internal circulation, building locations, and parking will be provided under a separate submittal.

Commercial

The 4.26 acre (26.4 KSF) commercial development is located along Dishman-Mica Road and at the southwest end of the project site. There may be one or more accesses from Dishman-Mica Road and/or an internal access to the proposed road and the other land uses to the north and east of the commercial development. Currently the southernmost commercial property has an existing access to Thorpe Road which will be retained.

Apartments (Mixed Use)

The 52 apartment units are proposed to be located over the retail space of the commercial development. There may be a single access from Dishman-Mica Road or an internal access to the proposed road as the apartments will use the commercial development access.

Development Open Spaces

The proposed development incorporates flood control facilities within and under the large open space area to the south. The 10 acre open space of the development not only includes the park setting at the south but also a trail system that weaves through every corner of the development.

Project Access to Existing Transportation System

The PRD is anticipated to have 3 public Accesses (1 on Dishman-Mica Road, 2 on Madison Road), 2 private roadway accesses on Madison Road, 3 commercial driveways (1 Thorpe Road, 2 Dishman-Mica Road) , and 1 apartment driveway on Dishman-Mica Road. The PRD is anticipated to have a total of 9 points of access on and off the existing transportation system.

Existing Conditions within the Study Area

Land Use & Zoning

The site is located north of Thorpe Road east of Dishman-Mica Road and west of Madison Road in a portion of the SE ¼ of Section 33, T25N R44E W.M., within Spokane Valley, Washington. A vicinity map is included as Figure 1. The project site is currently zoned as Residential 3, and is the previous Painted Hills General Commercial/ Golf Course Site. The parcels to be developed by the project are 45336.9191, 44041.9144, 45334.9135, 45334.0110, 45334.0109, 45334.0108, 45334.0114, 45334.0113, and 45334.0106. Please see Figure 2-Site Plan.

Existing Roadways

The overall transportation network in this area consists of a state route, urban principle arterials, collectors, and local access roads.

Dishman-Mica Road extends south, southeast from Sprague Avenue to State Route 27, Approximately 7.4 miles in length. Dishman-Mica Road is a northwest/southeast two-way, two- and five-lane minor-principal arterial. Dishman-Mica Road is an arterial that serves the residential neighborhoods that extend from Sprague Avenue to Bowdish Road. Dishman-Mica Road intersects with 8th Avenue, 16th Avenue, 32nd Avenue, University/Schafer Road and Bowdish Road with small commercial uses located at or near the intersections of 16th Avenue, University Road and Bowdish Road. Dishman-Mica Road then winds through a rural area before intersecting with State Route 27. Within the study area the posted speed limit on Dishman-Mica Road is 45 MPH.

University Road is a north/south, two-way, 2-, 3-, 4-, & 5-lane minor arterial that serves a large residential area south of Interstate 90. It runs south from Nora Avenue, and crosses several major arterials, until it intersects with Dishman-Mica Road. University Road, between Mission Avenue and Sprague Avenue is a three-lane roadway. From Sprague Avenue to 4th Avenue, it changes to become a five-lane roadway. South of 4th Avenue to Dishman-Mica Road, it reduces to a four-lane roadway and continues to Dishman-Mica Road where the roadway transitions into Schafer Road. Dishman-Mica Road is posted at 35 MPH speed limit within the study area. The University Road section includes bike lanes from 16th Avenue to Mission Avenue, and sidewalks for pedestrians from Dishman-Mica Road to Mission Avenue.

Schafer Road is a north/south, two-way, 2-lane, collector that serves a large residential area south of Dishman-Mica Road. Schafer Road runs south from Dishman-Mica Road to 44th Avenue. Schafer Road, between Dishman-Mica Road and 44th Avenue is a two lane roadway with shoulders, but no sidewalk or bike lanes. Schafer Road is posted at 35 MPH within the study area.

Bowdish Road is a north/south, two-way, 2-lane, minor arterial serving a large residential area south of Interstate 90. Bowdish Road runs south from Mission Avenue, and crosses several

major arterials, until it intersects with Sands Road. Bowdish Road, between Mission Avenue and Dishman-Mica Road is a two-lane roadway. South of Dishman-Mica Road, Bowdish Road crosses the Union Pacific Railway and becomes a local access roadway. Sands Road branches off of Bowdish Road and continues the arterial to 44th Avenue. Bowdish Road is posted at 25 MPH on the local access portion, and is posted on the minor arterial as 35 MPH.

State Route 27 is a north/south, two-way, 2-, 3-, 4-, & 5-Lane State Highway. State Route 27 extends south from Spokane Valley to Pullman, Washington and serves the many small farming communities of the Palouse. Within the City of Spokane Valley, State Route 27 follows the Pines Road alignment between Trent Avenue and 16th Avenue. South of 16th Avenue, State Route 27 shifts to the Blake road alignment serves the surrounding urban residential uses to 32nd Avenue where it serves a small cluster of commercial uses at the intersection of State Route 27 & 32nd Avenue. From Trent Avenue to 16th Avenue the posted speed limit is 35 MPH. From 16th Avenue to the 41st Avenue Alignment the posted speed limit is 45 MPH, beyond 41st Avenue SR 27 generally has a speed limit of 55 MPH.

16th Avenue is an east/west, two-way, 2- & 3-lane minor arterial that extends east from Bluff Drive (west of Dishman-Mica Road). Through the City of Spokane Valley to Shamrock Street (South of Shelley Lake). 16th Avenue generally serves residential land uses and commercial land uses located at the intersections of arterials. The posted speed limit on 16th Avenue is 35 MPH with the exception of the University Elementary, the McDonald Elementary, and the Evergreen Jr. High School zones where the posted speed limit is 20 MPH with beacons. The 16th Avenue Road section from Dishman-Mica Road to Sullivan Road includes sidewalks and bike lanes.

32nd Avenue is an east/west, two-way, 2-, 3- & 4-lane principle arterial. 32nd Avenue extends east from Dishman-Mica Road to Sullivan Road and serves mostly urban residential uses, but also provides access for commercial uses and University High School. The posted speed limit is 35 MPH with the exception of University High School zone where the speed limit is 20 MPH when children are present. The 32nd Avenue Road section has sidewalk from Dishman-Mica Road to SR 27, and bike lanes from University Road to SR 27. Additional sidewalk and bike lanes are from Evergreen Road to Best Road.

Pines Road is a north/south two-way, 2-, 3-, & 5-lane state route and collector that extends south from Trent Avenue to 40th Avenue. From 16th Avenue to 32nd Avenue Pines Road is a proposed Collector. From 32nd Avenue, to 40th Avenue Pines Road is a collector. Pines Road serves residential uses and a commercial land use located on the northwest corner of Pines Road & 32nd Avenue. The speed limit on Pines Road is 35 MPH, with the exception of the South Pines Elementary school zone where the speed limit is 20 MPH with flashing beacons. The Pines Road Roadway section includes sidewalk along its entire length, and includes bike lanes from 22nd avenue to 32nd Avenue.

Evergreen Road is a north/south, two-way, 2-, 3-, 5- & 6-lane urban principle arterial. Evergreen Road extends south from Indiana Avenue to 32nd Avenue and intersects with eight other minor and major arterials in the City of Spokane Valley. From Indiana Avenue to Interstate 90 Evergreen Road has six-lanes. From Interstate 90 to 4th Avenue, Evergreen Road is a five-lane road. From 4th Avenue to 16th Avenue, Evergreen is a three-lane road. From 16th Avenue to

32nd Avenue Evergreen Road is a two-lane roadway The area surrounding Evergreen Road is generally single family residential uses and small pockets of commercial uses located at or near the arterial intersections. The posted speed limit on Evergreen is 35 MPH. Evergreen Road includes sidewalk from 32nd Avenue to 24th Avenue and from 16th to Indiana. Evergreen Road has a bike lane from 32nd Avenue to Sprague Avenue.

Sullivan Road is a north/south, two-way, 2-, 3- & 5-lane urban principal arterial that extends south from Wellesley Avenue to just beyond 32nd Avenue. Sullivan Road serves East Valley High School and Central Valley High School, residential, and commercial uses. The posted speed limit is 35 MPH. The Sullivan Road Roadway section includes sidewalk and bike lanes from 16th Avenue to 32nd Avenue, and sidewalk from 16th Avenue to Wellesley Avenue.

Madison Road is a north/south, two-way, 2-lane collector road that extends south from the intersection of Pines Road & 40th Avenue, which is northeast of the site, through Thorpe Road, until eventually changing into Mohawk Drive. Madison Road is posted at 35 MPH and provides access to residential roads on its east and west side. Madison Road has no Sidewalk or bike lanes.

Thorpe Road is an east/west, two-way, 2-lane collector road that extends east from Dishman-Mica Road to Madison Road. Thorpe Road generally serves commercial land uses. The posted speed limit on Thorpe Road is 35 MPH.

Study Area Intersections

The project study area intersections were identified through a neighborhood traffic scoping meeting and discussions with the City of Spokane Valley, Spokane County, and the Washington State Department of Transportation (WSDOT). The scope of the study encompasses the AM and PM peak hours of twelve existing intersections and five proposed intersections.

- 32nd Ave & University Rd
- Dishman-Mica Rd & University/Schafer Rd
- 32nd Ave & Bowdish Rd
- Dishman-Mica Rd & Bowdish Rd
- Dishman-Mica Rd & Sundown Dr. (Proposed)
- Dishman-Mica Rd & Thorpe Rd
- 16th Ave & Pines Rd
- 16th Ave & SR 27
- 32nd Ave & Pines Rd
- Madison Rd & Painted Hills Ave (Proposed)
- Madison Rd & 41st Ave (Proposed)
- Madison Rd & 43rd Ave (Proposed)
- Madison Rd & 44th Ave (Proposed)
- Madison Rd & Thorpe Rd
- 32nd Ave & SR 27
- 32nd Ave & Evergreen Rd
- 32nd Ave & Sullivan Rd

Traffic Control and Descriptions

32nd Avenue & University Road is a signalized intersection. The intersection has the following lane configuration: the east and westbound approaches have a left-through lane, a through-right lane, and two receiving lanes that immediately reduces to one lane. The north and southbound approaches have a left turn lane, a through lane, a through-right lane, and two receiving lanes.

Dishman-Mica Road & University/Schafer Road is a signalized intersection. The intersection has the following lane configuration: the Dishman-Mica Road westbound approach has a left turn lane, a through lane, a through-right lane, and a single receiving lane. The Dishman-Mica Road eastbound approach has a left turn lane, a through lane, a right turn lane, and two receiving lanes. The Schafer Road northbound approach has a left turn lane, a through-right lane, and a single receiving lane. The University Road southbound approach has a left turn lane, a through lane, a right turn lane, and two receiving lanes.

32nd Avenue & Bowdish Road is a signalized intersection. The intersection has the following lane configuration: the east and westbound approaches have a left turn lane, a through-right lane, and a single receiving lane. The north and bound approaches have a left-through-right lane, and a single receiving lane.

Dishman-Mica Road & Bowdish Road is a signalized intersection. The intersection has the following lane configuration: the Dishman-Mica Road eastbound & westbound approaches have a left turn lane, a through-right lane, and a single receiving lane. The Bowdish Road northbound approach has a left-through-right lane, and a single receiving lane. The Bowdish Road southbound approach has a left-through lane, a right turn lane, and a single receiving lane.

Dishman-Mica Road & Thorpe Road is an unsignalized "T" type intersection with stop control on the Thorpe Road. The intersection has the following lane configuration: the westbound approach has a left-right turn lane, and a single receiving lane. The northbound approach has a through-right lane, and a single receiving lane. The southbound approach has a left-through lane, and a single receiving lane.

16th Avenue & Pines Road is an unsignalized intersection with stop control on Pines Road. The intersection has the following lane configuration: The eastbound approach has a through-right lane, and a single receiving lane. the westbound approach has a left-through lane, and two receiving lanes. The northbound approach has a left-right turn lane, and a single receiving lane. The southbound approach has a left-through-right lane, and no receiving lanes.

16th Avenue & State Route 27 is a signalized intersection. The intersection has the following lane configuration: The eastbound approach has a left-through lane, a right turn lane, and a single receiving lane. The westbound approach has a left-through-right lane and a single receiving lane, with an additional channelized right turn lane that yields to northbound traffic. The northbound & southbound approaches have a left turn lane, a through lane, a through-right lane, and two receiving lanes.

32nd Avenue & Pines Road is a signalized intersection. The intersection has the following lane configuration: all approaches have a left turn lane, a through-right lane, and a single receiving lane.

Madison Road & Thorpe Road is an unsignalized 2-way stop control intersection. There is one stop sign on the eastbound approach and the opposing driveway is obligated to stop on the approach. The intersection has the following lane configuration: the eastbound approach has a left-through- right turn lane, and a single receiving lane. The Westbound approach is a private driveway and includes a left-through-right lane and a single receiving lane The northbound and south bound approaches have a left-through-right lane, and a single receiving lane.

32nd Avenue & State Route 27 is a signalized intersection. The intersection has the following lane configuration: The eastbound approach has a left turn lane, a through lane, a through-right turn lane, and a single receiving lane. the westbound approach has a left turn lane, a through-right lane, and two receiving lanes. The north and southbound approaches have a left turn lane, a through lane, a through-right lane, and two receiving lanes.

32nd Avenue & Evergreen Road is an unsignalized intersection with stop control on Evergreen Road. The intersection has the following lane configuration: The eastbound approach has a left turn lane, a through-right lane, and a single receiving lane. the west, and northbound approaches have a left-through-right lane, and a single receiving lane. The Southbound approach has a right turn lane, a left-through lane, and a single receiving lane.

32nd Avenue & Sullivan Road is an unsignalized "T" type intersection with stop control on 32nd Avenue. The intersection has the following lane configuration: the eastbound approach has a left-right turn lane, and a single receiving lane. The northbound approach has a left-through lane, and a single receiving lane. The southbound approach has a through lane, a right turn lane, and a single receiving lane. There was a westbound approach that was a driveway entrance but has been blocked off for several years.

Traffic Safety

For the intersections within the study area accident report summaries were received from City of Spokane Valley and WSDOT. Generally accidents are documented by type of occurrence, such as property damage or injury. No fatalities were reported for the study intersections during the last three years.

$$Rate\ per\ MEV = \frac{number\ of\ accidents\ in\ three\ years\ X\ 1\ million}{PM\ Peak\ hour\ volume\ X\ 10\ \ X\ 365\ X\ 3\ years}$$

Equation 4-2 of ITE manual of traffic engineering studies (fourth edition) (modified given the available data, for 3 years and utilizes PM peak hour volumes ~ 10% of ADT)

In this analysis accidents are measured based on frequency per million entering vehicles (MEV). This ratio is a function of the average daily traffic entering the intersection and the annual frequency of accidents. This method of analysis is also considered as an "exposure" analysis. This method of analysis is used to identify areas that need further review. A typical review threshold for accidents at an intersection is 1.00 accidents per MEV. The accident data for the intersections within the study area are shown in Table 1.

Table 1 – Accident Data for Intersections within the Study Area

ACCIDENT DATA								
Intersection	**2011**		**2012**		**2013**		**INTX**	**Per**
	PDO	**INJ**	**PDO**	**INJ**	**PDO**	**INJ**	**ADT**	**MEV**
32nd Ave & University Rd	1	0	1	0	0	0	10,120	0.18
Dishman-Mica Rd & University/Schafer Rd	0	0	2	0	0	2	9,570	0.38
32nd Ave & Bowdish Rd	2	1	2	0	0	0	12,660	0.36
Dishman-Mica Rd & Bowdish Rd	1	2	0	0	0	1	8,190	0.45
Dishman-Mica Rd & Thorpe Rd	0	0	0	0	0	0	4,690	0.00
16th Ave & Pines Rd	4	0	2	2	3	1	10,430	**1.05**
16th Ave & SR 27	1	1	1	2	1	0	13,160	0.41
32nd Ave & Pines Rd	1	0	2	1	2	0	12,510	0.44
Madison Rd & Thorpe Rd	0	0	0	0	0	0	2,190	0.00
32nd Ave & SR 27	1	0	0	0	0	0	16,960	0.11
32nd Ave & Evergreen Rd	0	0	0	0	0	0	10,570	0.00
32nd Ave & Sullivan Rd	0	0	0	0	0	0	7,090	0.00

As shown in the table above most intersections within the study area do not meet or exceed the threshold for further review. However, the intersection of 16th Avenue & Pines Road does exceed the threshold for further analysis.

16th Avenue & Pines Road

A review of the accident data shows that 9 of the 12 accidents reported were accidents that occurred at an angle, typical of a T-bone accident or a failure to yield the ROW by a turning vehicle. The other accidents include a rear-end collision, a fixed object, and a pedestrian incident. For the accidents that occur at an angle, 6 out of the 9 accidents occurred when a SB through vehicle entered the intersection. We recommend that the number of conflict points at the

intersection be reduced and that additional warning of an intersection be provided to WB vehicles.

Traffic Volumes and Peak Hours of Operation

Traffic counts were collected as required by scoping under the direction of WCE in the months of January through March 2015, however for technical reason associated with the requirements of chapter 3 of the COV Road standards they were mostly recounted in October 2015. Counts were completed at the following intersections for the peak hour (AM/PM) time listed below:

- 32nd Ave & University Rd (AM & PM)
- Dishman-Mica Rd & University/Schafer Rd (AM & PM)
- 32nd Ave & Bowdish Rd (AM & PM)
- Dishman-Mica Rd & Bowdish Rd (AM & PM)
- Dishman-Mica Rd & Thorpe Rd (AM & PM)
- 16th Ave & Pines Rd (AM & PM)
- 16th Ave & SR 27 (AM & PM)
- 32nd Ave & Pines Rd (AM & PM)
- Madison Rd & Thorpe Rd (AM & PM)
- 32nd Ave & SR 27 (AM & PM)
- 32nd Ave & Evergreen Rd (AM & PM)
- 32nd Ave & Sullivan Rd (AM & PM)

The peak hour from these counts are shown on Figures 3 and 4. The raw data for these counts are located in the technical appendix.

Public Transit and School Bus Transportation

The Spokane Transit Authority (STA) currently provides service routes to this area. Key Bus stops are located at the following intersections: 16th Avenue & Pines Road, 32nd Ave Avenue & University Road, 32nd Avenue & Pines Road, 32nd Avenue & SR 27, and 32nd Avenue & Evergreen Road. There are additional stops located along the STA routes located about every quarter mile. The STA Stop at the intersection of 32nd Avenue & Pines Road is the closest to the project and is located approximately 3,160 feet +/- or 0.6 mi from the projects northern border on Madison Road.

The Central Valley School District currently provides student bus service to the area.

Public Involvement

On March 3, 2015 a community and traffic scoping meeting was held at the Chester Elementary School located at 3525 S Pines Road, Spokane Valley, WA 99206. The following is a list of questions and concerns raised by the community at the meeting, and our responses at that time.

The responses provided here, are compiled from the meeting notes and are paraphrased for clarity and brevity. Additional information/responses from the traffic study or other source have been provided in order to answer the publics comment to the best of our ability.

Community Meeting

The project was presented as depicted in the preliminary site plan of the TGDL. All phases of the project were described, the proposed units of each phase were stated and the accesses were described. During the pre-amble & opening, Todd Whipple noted the following: That this is an outright permitted use, which this project will not go before city council, but will go before the hearing examiner.

- Question: Who is the developer?

The developer is Dave Black.

- Question: Why was this meeting scheduled on a Tuesday night when no City Council members can attend?

We picked this night, with no intention to not allow Council members to attend. ***City staff wanted it noted here: that after the meeting had been scheduled. They requested that the meeting be moved to a non council night, Since the meeting had already been advertised it would have required another reschedule and confusion to the public.***

- Question: If this is not the right venue to discuss school overload issues, then what is?

If one would like to present his or her concerns about overloading school issues, then he or she is more than welcome to attend the hearing that comes later after these meetings. One is also encouraged to write a letter to the school district, because they will be able to give one a more accurate answer.

- Question: Why are there four accesses to the project to/from Madison Road and only one to/from Dishman-Mica Road?

We tried to keep all of the commercial and apartment development on Dishman-Mica Road.

- Question: Based on the International Fire Code, are you not allowed to place 30 lots on a single access?

We have met with the Fire Department and we have a modified map (attached) that will allow us emergency accesses as required, we did not change the plan for this meeting as this was the plan that was advertised.

- Question: What plan do you have to mitigate the fire safety issue around the Painted Hills area when you are proposing to introduce about 1,300 cars into the mix?

We do not have an answer for this at this time, but the question has been noted. Following up with the agencies, a specific fire safety issue was not identified at this time. If a member of the public has a specific fire safety concern, then we recommend that he/she take that specific concern to the Commissioners of Fire Districts #1 and #8.

- Question: With the current zoning of R3 for this Painted Hills area, don't you have to leave about 30% of the acreage for open space?

According to Spokane Valley zoning codes, if we stay with the R3 zoning, then we are not required to leave any open space at all. However, a Planned Residential Development (PRD) is required to have 30% open space; therefore we have left 30% open.

- Question: How will this area, all of a sudden, not become a flood plain?

This area is technically only a flood plain, because it is Compensatory Storage. Compensatory Storage means that water that comes onto your land (or this site) sits there and filters through the ground. We will be working with the City and FEMA to address this issue.

- Question: What do you do with the flood plain?

We have to take every drop of water that comes to the site, and we will be coming up with ways to collect it and discharge it into the ground.

- Question: Is this area an AE Zone?

Yes, this area is an AE zone as it relates to Compensatory Storage. We can discharge the water throughout the site in many different ways.

- Question: All of these forms of discharging are shown on the FEMA map?

Yes they are located on the FEMA map.

- Question: When do we all get the chance to ask the questions we want to ask?

We will talk to the developers after this meeting. Your only chance may come at the Hearing. However, we currently do not know when the Hearing will be.

- Question: Will there be notices sent out about these meetings?

Yes there will be notices sent out about these meetings.

- Question: Since the school district is not allowed to project how many new kids will be coming out of this new development, as they must give an exact amount, when will this bond go up?

We will move through the process this year. As of this moment, it is projected that the development will be built out over the next 5 to 10 years depending on market conditions, as well as other factors. (Checked with the developer buildout may be completed in 10-15 years.)

Traffic

- Question: Are the accesses off of Madison Road set in stone or can they be changed?

This is our proposal as of now and it is set to be designed this way unless traffic provisions do not allow us to do so.

- It was addressed that the school hours are outside of the AM & PM peak hours.

WCE Completed counts around the three schools here are those results: Traffic counts are usually done between 6:30-9:30AM & 3:30-6:30PM. The commuter traffic is where the peak hour is located, not generally during school hours. Tube counts were placed around each of the three schools (Chester Elementary, Horizon Middle, and University High) with the peak hours reported as follows:

Type of Peak Hour	High School		Middle School		Elem. School	
	Vol.	Time	Vol.	Time	Vol.	Time
AM Commuter	806	7:00AM	269	7:15AM	179	7:15AM
AM School	806	7:00AM	269	7:15AM	179	7:15AM
PM School	788	2:15PM	209	2:30PM	139	2:30PM
PM Commuter	966	5:00PM	210	5:00PM	140	5:00PM

As the above table shows, the AM Commuter & AM School peak hours occur at the same time for the High School, Middle School, and Elementary School. The traffic volumes are shared between AM commuters and school travelers, due to the identical peak hour.
Unlike the AM peak hour traffic, the PM Commuter traffic is higher than the PM School traffic for the High School, Middle School, and Elementary School. The traffic volumes are not shared between PM commuters and school travelers, because the peak hours occur at different times. Therefore if we mitigate or maintain an acceptable level of service for the PM peak hour commuter, the time of greatest impact, then we also mitigate or maintain an acceptable level of service for the other peak hours.

- Question: Who is conducting the Traffic Impact Analysis? Are there going to be turn lanes put in on Dishman-Mica & Madison Road, due to this project?

WCE will be conducting the Traffic Impact Analysis. There will most likely be a widening of these streets for this project.

- Question: Will you take into account that Thorpe Road floods and closes sometimes during the spring?

Yes we will. This will be considered and included in our flood control plans and reports. This will not be addressed in this report.

- Question: If the study shows that center turn lanes will need to be added to Madison Road, will that be funded by the developer?

Yes, the developer will fund that work.

- Question: Will you be adding a 3-way stop at Madison Road & 40th Avenue? Recently, walking down on 38th Avenue, we were not able to cross the street due to the high volume of traffic.

The concern has been submitted to the City of Spokane Valley Traffic Engineer.

- Question: Will you be studying Woodlawn Road as well? For some reason, people are cutting through Woodlawn Road in order to get to 32nd Avenue.

WCE will study Woodlawn Cut through for the neighborhood, that study is included here:

Tube counters were placed on Woodlawn Road at 32nd Avenue and 40th Avenue, per the public's request. We have reviewed the counts at both ends of the Woodlawn Road, we have considered the 15 single family residences located to the south of 40th Avenue and after considering the trips from those residents a difference of entering and exiting trips can be seen. This difference during the three peak hours are trips that travel between 32nd Avenue & 40th Avenue and are as follows:

> **In the AM peak hour beginning at 7 AM there may possibly be 79 southbound cut-through trips and 38 northbound cut-through trips. For the 2 PM peak hour there may be 66 southbound cut-through trips and 57 northbound cut-through trips. For the 5 PM peak hour there may be 39 southbound cut-through trips and 29 northbound cut-through trips.**

As some of these trips primarily coincide with the School Peak hours, the reasons for these trips may be from congestion on 32nd Avenue in front of the High School, or from parents that are picking up and dropping off students at the middle or elementary schools, desiring a northbound orientation. However, this type of tube count study is limited as trips will sometimes double back on the anticipated route

Therefore a video of each end of Woodlawn was conducted simultaneously. A member of the staff then reviewed the tapes noting vehicle type, color, and time to identify vehicle. During the AM peak hour there were 5 cut-through trips identified, and in the PM peak hour there were 7 cut-through trips identified.

Considering this information and given the volumes of traffic counted on Woodlawn Road there is no roadway capacity issue as a local access roadway can support the traffic volumes counted. Therefore we must conclude that the main concern is speeding on Woodlawn Road, an element that we have not measured, and is not a part of this study. From our experience not all cut-through traffic speeds through a cut-through route. But speeding can be done by even those that live within the neighborhood. Therefore we are going to leave this as an enforcement issue with the City of Spokane Valley.

We recommend that the neighborhood association invite a representative of the Spokane Valley Police department to attend one of their meetings in order to discuss the speeding issue. We also recommend that the neighborhood association talk to the public works director, and the traffic engineer of the City of Spokane Valley to discuss how they may incorporate traffic calming measures that will not interfere with road maintenance, such as curb extensions or traffic circles.

- Question: As a board member of Midlome East (neighborhood association) , we have tried to talk to the agencies about the high traffic volumes on Woodlawn Road for the last 10 years, and have gotten nowhere. Will this issue get addressed?

We are aware of some of the issues with cut-through traffic. We will talk to the jurisdictions about this issue and see how they would like us to proceed.

- Question: Why is Pines Road shown as a Minor route for a portion of the road instead of a Major route throughout?

This issue will be addressed through the traffic counts, which will give us the necessary data to possibly consider Pines Road a major route throughout.

- Question: Will the developer pay for the mitigations?

The developer will pay for anything that he breaks (yes, he will mitigate to project impacts).

- There was a comment that someone lived on Woodlawn Road and eventually moved due to the extremely high traffic volumes.

This comment has been noted, Counts of Woodlawn do not seem excessive for a roadway utilized as a collector in the City of Spokane Valley.

- There was a comment that the intersection of Pines Road & 24th Avenue should be included in this study due to the high amount of people who travel through this intersection.

This comment has been noted; however, the agencies did not include this intersection into the study.

- Question: How long does the traffic study last?

Traffic studies are based on traffic counts. Counts are done on Tuesdays, Wednesdays, & Thursdays during the previously mentioned peak hours. These days have proven to be the most reliable and most accurate for showing true traffic volumes on the streets. In commercial areas, counts are performed from 10AM to 2PM. We do not count Sundays, unless there is a church problem. We can do a combination of tube counts and individual counts.

- There was a comment made that Chester School, on Thursdays, starts at 10:10AM.

This comment has been noted. See the previous response with regard to school peak hours.

- There was a comment made that tomorrow at 6PM, there is a community vision meeting at Mirabeau.

Our advice was to pay close attention to Growth Management and Growth Management meetings.

- Question: When will the traffic study start?

The traffic counts will begin next week.

- Question: Is each intersection scoped only counted once?

Yes, once in the AM and once in the PM.

- Question: Will the congestion, due to the school traffic on Pines Road, be accounted for in the traffic counts?

If the congestion falls within the time that the counts occur, then yes it will be counted in.

- Question: Will you count pedestrians?

Pedestrians were counted at the intersections. For the signalized intersections the pedestrians are grouped and queued at the corner where they push the crosswalk button and then cross the roadway this action is call a pedestrian call by the traffic software and is included as such. For pedestrians at an unsignalized intersection pedestrians are recorded, but are not used by the traffic software to model the intersection.

- Question: Where can we go to affect change?

One can go to the Growth Management meeting and participate in the Growth Planning Processes, and one can also attend the Hearing and speak to the Hearing Examiner.

- Question: How do you calculate the traffic volumes based on the number of new units to be installed?

Prior to this meeting, WCE turned in a Trip Generation & Distribution Letter to the jurisdictions that allowed us to have this meeting. We use the ITE Trip Generation Manual 9th Edition.

- Question: Can you describe an intersection? What is an intersection to you?

An intersection is where two streets come together or when a driveway and a street come together.

- Question: How many apartment projects are going in? How many people are there going to be? Who is paying the taxes on this new project to help build the new schools?

There is only the one apartment complex that is being proposed. There is also a mixed-use apartment land use. Studies show that about 1.77 people live in each unit. Also, the owner of the apartment complex pays property taxes that go to help fund the local schools.

- Question: If we live on 32nd Ave & McDonald Street and it is already hard for us to get onto 32nd Ave, doesn't it make sense that this problem will only get worse?

When we perform the traffic counts on certain intersections, we will calculate Level of Service for each intersection. Level of Service is based on a letter grade A-F, with F being the worst case. Todd Whipple then described the Levels of service with the delays and experiences of the driver.

- Question: Will you be studying where there are children school crosswalks?

A review of school crosswalks was not included, as this review would be between the school district and the City of Spokane Valley.

- Question: If it is decided that Madison Road needs further expansion, how will the traffic flow operate during construction?

The road will most likely not be closed if under construction, but after talks with the school districts and the City, construction will most likely be conducted throughout normal traffic hours.

- Question: Who decides which intersections will be counted in the study?

The agencies of the City of Spokane Valley, Spokane County, and WSDOT. You can also contact the City to see when the scoping meeting will take place in order to be a part of that.

- Question: What is your goal for LOS when conducting a traffic study?

It depends on the intersection and the Level of Service. If further mitigation has to be done to fix an intersection than that will occur. However, if the jurisdictions decide that, for instance, at

an intersection where a Level of Service "E" is existing and will continue to be this way, there might not be any change.

- Question: Are there any plans to run 40th Avenue over to Highway 27?

There used to be plans or Right-of-way, but there are no such plans anymore.

- Question: Are you planning for sidewalks & streetlights on Dishman-Mica Road & Madison Road?

Yes, as part of the frontage improvements to the streets, sidewalks and streetlights will be added or improved.

- Question: For the cottages, will there be one or two accesses?

There will be two accesses.

- Question: Are you familiar with Robie Street? Is there any chance that there could be access to the cottages using Robie Street?

WCE is not familiar with this intersection, but this question of an additional access to the north has been noted. ***After finding Robie Street, it was determined that the development will not pursue an access to the north.***

- Question: If from the traffic study, it is found that the intersection of 32nd Ave & Pines Road becomes highly congested, what is your solution?

We do not have a solution at this time. Through further study, it is our responsibility to find a solution if there happens to be a high congestion problem.

- Question: Will any changes that come from the traffic study be done before or after the construction?

Any changes in traffic will be concurrent with construction.

- Question: How far out, geographically, is the study responsible for?

The City of Spokane Valley & Spokane County have standards that we follow when performing the study. They will tell us which intersections to study, and before the study is completed, further intersections could be studied based on previous observations & data.

- Question: What would be needed to expand Dishman-Mica Road from two lanes to four lanes from University Road to Madison Road?

It would take a large additional traffic impact in order to expand the road in these areas.

- Question: Could you add a traffic count on the intersection of Woodlawn Road & 40th Ave?

Please see previous response regarding the additional traffic study to Woodlawn Road.

- Question: How much increase in traffic volume would warrant the installation of a new traffic signal?

Once intersections move towards a LOS "F", we move to a section called "Warrants". If an intersection moves towards two to four warrants, then a traffic signal could be installed.

- Question: How long is the time span for the traffic study, as the volume will grow over time as developments go up?

We will perform the traffic study for each phase of construction, and if a certain phase requires work to be done to improve a traffic problem, then the work will be done during that phase.

- There was a comment made that it seems like a conflict of interest for WCE to say that "we" are performing the traffic study.

The jurisdictions make the developer hire a traffic engineer to perform the study. The traffic engineer turns the work into the City, who then reviews it and makes necessary comments. Then, the traffic engineer makes the changes and eventually the City accepts the study as their own traffic study for the developer and his or her project, all as part of the SEPA and concurrency process.

- Question: How many cars does it take to determine a certain Level of Service?

LOS is determined by average delay, not the numeric number of cars waiting or using an intersection.

- Question: How many phases will there be for this project?

At this time, WCE has not decided the number of phases for the proposed project.

- Question: Living on Dishman-Mica Road, I'm wondering how long the left turn lanes would be off of the proposed center turn lane, because some turns are tight and short?

Left turns lanes are usually no less than 100 feet long, and not longer than 300 feet.

- Question: Do you consider projects that have already been approved by the County into your study?

Yes, we do consider these background projects into our traffic study. Further analysis is performed on projects that have been approved, but not fully built out. We treat all background projects to be fully built out to account for the most conservative results. Please see the background project section of this report.

- Question: Are you aware that there are developments along Madison Road that have been previously permitted by the County?

Please see the background project section of this report.

Note: WCE observed that many of the school congestion questions were from directly affected parents and seniors, that have a history of leaving and returning to their residence from 9 AM to 3 PM. WCE believes that this non-commuter perspective has skewed their perspective of the Peak hour. This being said the provided tube counts have established the peak traffic around the schools.

LEVEL OF SERVICE

Level of service (LOS) is an empirical premise developed by the transportation profession to quantify driver perception for such elements as travel time, number of stops, total amount of stopped delay, and impediments caused by other vehicles afforded to drivers who utilize the transportation network. It has been defined by the Transportation Research Board in the *2010 Highway Capacity Manual.* This document has quantified level of service into a range from "A" which indicates little, if any, vehicle delay, to "F" which indicates significant vehicle delay and traffic congestion that may lead to system breakdown due to volumes that may exceed capacity.

Signalized Intersections

For signalized intersections, research has determined that average stopped delay per vehicle is the best available measure of level of service. The following tables identify the relationships between level of service and average stopped delay per vehicle. City of Spokane Valley (Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan), and WSDOT have adopted level of service D as the minimum acceptable level for all signalized intersections.

Level of Service Criteria and Descriptions - Signalized

LOS	Delay Range (sec)	General Description
A	10	• Very low delay at intersection. • All signal cycles clear. • No vehicles wait through more than one signal cycle.
B	10 to 20	• Operating speeds beginning to be affected by other traffic. • Short traffic delays at intersections. • Higher average intersections delays resulting from more vehicles stopping.
C	20 to 35	• Operating speeds and maneuverability closely controlled by other traffic. • Higher delays at intersections than for LOS B due to a significant number of vehicles stopping. • Not all signal cycles clear the waiting vehicles.
D	35 to 55	• Tolerable operating speeds, but long traffic delays occur at intersections • The influence of congestion is noticeable. • Many vehicles stop and the proportion of vehicles not stopping declines. • The number of signal cycle failures, for which vehicles must wait through more than one signal cycle are noticeable.
E	55 to 80	• Speeds are restricted, very long traffic delays are experienced and traffic volumes are near capacity. • Traffic flow is unstable, any interruption, no matter how minor, will cause queues to form and service to deteriorate. • Traffic signal cycle failures are frequent occurrences.
F	80	• Extreme delays resulting in long queues which may interfere with other traffic movements • Stoppages of long duration and speeds may drop to zero. • Vehicle arrival rates are greater than capacity. • Considered unacceptable by most drivers.

Unsignalized Intersections

The calculation of level of service (LOS) at an unsignalized one/two-way stop-controlled intersection is examined in the Transportation Research Board's *2010 Highway Capacity Manual.* For unsignalized intersections, level of service is based on the delay experienced by each movement and approach within the intersection. The concept of delay as presented for unsignalized intersections in the Highway Capacity Manual is based on the amount of time a vehicle must spend at the intersection. Vehicles passing straight through the intersection on the major (uncontrolled) street experience no delay at the intersection. On the other hand, vehicles which are turning left from the minor street, because they must yield the right of way to all right turning vehicles, all left turning vehicles from the major street and all through vehicles on both the minor and major streets, must spend more time at the intersection. Levels of service are assigned to individual movements within the intersection, and are based upon the delay experienced by each movement or approach.

The Transportation Research Board has determined what levels of service for unsignalized intersections should be, by designating level of service A through F, where level of service A represents a facility where no vehicle in any movement is delayed very long and level of service F which represents a facility where there is excessive delay for the average vehicle in at least one movement in the intersection. City of Spokane Valley (Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan), and WSDOT have adopted level of service E for all unsignalized intersections within the study area.

Level of Service Criteria and Descriptions - unsignalized

LOS	Delay Range (sec)	Expected Delay to Minor Street Traffic	General Description
A	10	Little to No Delay	• Nearly all drivers find freedom of operation. • Very seldom is there more than one vehicle in the queue.
B	10 to 15	Short Traffic Delays	• Some drivers begin to consider the delay an inconvenience • Occasionally there is more than one vehicle in the queue.
C	15 to 25	Average Traffic Delays	• Many times there is more than one vehicle in the queue. • Most drivers feel restricted, but not objectionably so.
D	25 to 35	Long Traffic Delays	• Often there is more than one vehicle in the queue. • Drivers feel quite restricted.
E	35 to 50	Very Long Traffic Delays	• Represents conditions in which, demand is near or equal capacity. • There is almost always more than one vehicle in the queue. • Drivers find the delays approaching intolerable levels.
F	50	Stop-and-Go Condition Delays Generally Longer than Acceptable	• Forced flow. • Represents an intersection failure condition that is caused by geometric and/or operational constraints external to the intersection

Roundabout Intersections

The calculation of level of service (LOS) at an unsignalized one/two-way Roundabout is examined in the Transportation Research Board's *2010 Highway Capacity Manual*. For Roundabout intersections, level of service is based on the delay experienced by each movement and approach within the intersection. The concept of delay as presented for unsignalized intersections in the Highway Capacity Manual is based on the amount of time a vehicle must spend at the intersection. Vehicles on an approach must yield to the vehicle within the roundabout and wait for a gap before entering the roundabout. This time that a vehicle yields or waits for a gap is calculated and averaged. Levels of service are assigned to individual movements within the intersection, and are based upon the delay experienced by each movement or approach.

The Transportation Research Board has determined what levels of service for roundabouts should be, by designating level of service A through F, where level of service A represents a facility where no vehicle in any movement is delayed very long and level of service F which represents a facility where there is excessive delay for the average vehicle in at least one movement in the intersection. City of Spokane Valley (Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan), and WSDOT have adopted level of service E for all roundabout/unsignalized intersections within the study area.

Level of Service Criteria and Descriptions - Roundabout

LOS	Delay Range (sec)	Expected Delay to Minor Street Traffic	General Description
A	15	Little to No Delay	• Nearly all drivers find freedom of operation. • Very seldom is there more than one vehicle in the queue.
B	15 to 25	Short Traffic Delays	• Some drivers begin to consider the delay an inconvenience • Occasionally there is more than one vehicle in the queue.
C	25 to 35	Average Traffic Delays	• Many times there is more than one vehicle in the queue. • Most drivers feel restricted, but not objectionably so.
D	35 to 50	Long Traffic Delays	• Often there is more than one vehicle in the queue. • Multiple vehicles are in the roundabout and few gaps are available. • Drivers feel quite restricted.
E	50 to 75	Very Long Traffic Delays	• Represents conditions in which, demand is near or equal to capacity. • There is almost always more than one vehicle in the queue waiting for a gap. • Drivers find the delays approaching intolerable levels.
F	75	Stop-and-Go Condition Delays Generally Longer than Acceptable	• Forced flow, vehicle movements are slow to circulate, drivers wedge into the line. • Represents an intersection failure condition that is caused by geometric and/or operational constraints external to the intersection

All level of service analyses described in this report were performed in accordance with the procedures described above. As a final note, the Highway Capacity Manual (HCM) analysis and procedures are based upon worst case conditions. Therefore, most of each weekday and the weekends will experience traffic conditions better than those described within this document, which are only for the peak hours of operation.

Existing Level of Service and Traffic Analysis

The existing levels of service at the existing intersections were calculated using the methods from the *2010 Highway Capacity Manual* as implemented in Synchro, *version 9 - Build 902*. The existing levels of service for the intersections within the study area are summarized on the following table. The existing traffic volumes used for this report are shown on Figures 3 & 4.

Table 2 - Existing Intersections Levels of Service

Intersection Level of Service - Deficiency Evaluation

There are no deficiencies identified for intersection level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.

Intersection Movement Queue –Deficiency Evaluation for Existing Condition

The existing queue deficiencies are identified on Table 3 and described as follows; all noted intersections are currently functioning at acceptable levels of service.

- The EB Thru approach of the intersection of 16th Avenue & Highway 27. Where the existing queue of 452 feet exceeds the available space of 60 feet by 392 feet.

- The WB Thru approach of the intersection of 16th Avenue & Highway 27, Where the existing queue of 260 feet exceeds the available space of 170 feet by 90 feet.

- The WB Thru approach of the intersection of 32nd Avenue & Highway 27 Where the existing queue of 322 feet exceeds the available space of 165 feet by 157 feet.

- The WB left turn approach of the intersection of 32nd Avenue & Highway 27 Where the existing queue of 169 feet exceeds the available space of 150 feet by 19 feet.

Background Traffic Growth

Background traffic growth is an anticipated increase in traffic volume from year to year. As the existing land uses that surround a transportation facility mature, an increase in traffic results may be due to either an increase in drivers per household or a household's purchase of an additional vehicle. Many things can cause an increase in the traffic volumes of a facility. The objective of the background traffic growth rate is to anticipate what the traffic volumes may be in the future. The background traffic growth rate for an area or street is determined by means of physical counts collected by local governmental agencies. The counts are compared on a yearly basis and a rate of increase is calculated from the data.

For the study area, the background growth rate was determined by the City of Spokane Valley to be 1.1% per year. Based on a five-year build out (2020), compounded annually, the total increase in traffic is anticipated to total 5.6%. For the horizon year (2040) the total increase in traffic is anticipated to total 31.5%

Background Project Traffic

In addition to the increase in background growth, background projects that have already been approved or have made application and vested before this project have been included. The following projects have been scoped by the City of Spokane Valley, Spokane County, and WSDOT.

Table 4 – Background projects and Vested AM & PM Trips

Background Project	Remaining Lots/ units	AM Peak Hour Trips			PM Peak Hour Trips		
		Total	In	Out	Total	In	Out
Paxton Addition	13 lots	10	3	7	13	8	9
The Creek at Chester	44 lots	33	9	24	44	29	15
Pine Valley Ranch Apts.	132 units	69	14	55	90	59	31
Elk Ridge Heights	78 lots	59	15	44	79	51	28
Total Vested	-	**171**	**41**	**130**	**226**	**147**	**83**

Since the traffic from these background projects are not currently included in the existing traffic counts/volumes, the AM & PM trips anticipated from these developments are added to the future projected traffic volumes. Please see the anticipated increase of traffic due to the build out of these background projects per intersection on Figures 5 & 6.

TRIP GENERATION AND DISTRIBUTION

Trip generation rates for the AM and PM peak hours are determined by the use of the *Trip Generation Manual, 9th Edition* published by the Institute of Transportation Engineers (ITE). The purpose of the *Trip Generation Manual* is to compile and quantify empirical data into trip generation rates for specific land uses within the US, UK and Canada.

For the proposed development that includes 52 Cottage Style Single Family Lots, 206 Single Family Residential Lots, 42 Estate Type Single Family Lots, 228 Apartment Units, and a commercial development (4.26 ± ac), with a total square footage of 26,400 sf (26.4 KSF) and also 52 mixed use apartment units. The ITE Trip Generation Land Use Code (LUC) for each land use is listed below in Table 5.

Table 5 – Description of Land Use Code

Description	Number of Units / KSF	Land Use Code (LUC)
Cottage Style Single Family Lots	52 Units	Residential Townhouses – 230
Single Family Residential	206 Units	Single Family Residential – 210
Single Family Residential Estate Type	42 Units	Single Family Residential – 210
Apartments	228 Units	Apartments – 220
Apartments (mixed use)	52 units	Apartments – 220
Commercial Development	26.4 KSF	Shopping Center – 820

While the Commercial Development is anticipated to be developed more as a strip mall, (LUC 826 Specialty Retail), it was important that the existing restaurant not be excluded, hence the use of LUC 820 Shopping Center

Cottage Style Single Family Lots

For the 52 Cottage Style Single Family lots, Land Use Code #230, Residential Condominium/Townhouses was used to determine the trips generated by the proposed land use. The trips generated by the cottage Style Single Family land use are shown in Table 6.

Table 6 - Trip Generation Rates for Cottage Style Single Family Lots LUC #230 Residential Townhouses

Number of Lots	AM Peak Hour Trips			PM Peak Hour Trips		
	Vol. @ 0.44 trips/ Unit	Directional Distribution		Vol. @ 0.52 trips/ Unit	Directional Distribution	
		17% In	83% Out		67% In	33% Out
52	23	4	19	28	19	9
Average Daily Trip Ends (ADT)						
Lots	Rate	ADT				
52	5.81	303				

As shown in Table 6, in the AM peak hour the Cottage lots are anticipated to generate 23 driveway trips, with 4 trips entering the site, and 19 trips exiting the site. In the PM peak hour the project is anticipated to generate 28 driveway trips; with 19 trips entering the site, and 9 trips exiting the site. The Cottage Lots are anticipated to have an Average Daily Trips (ADT) of 303 trips to/from the site per day.

Single Family Residential

For the 206 single family units, Land Use Code #210, Single Family Residential, was used to determine the trips generated by the proposed land use. The trips generated by the single family residential land use are shown in Table 7.

Table 7 - Trip Generation Rates for Single Family Lots LUC #210 Single Family Residential

Number of Lots	AM Peak Hour Trips			PM Peak Hour Trips		
	Vol. @ 0.75 Trips/Unit	Directional Distribution		Vol. @ 1.0 Trips/Unit	Directional Distribution	
		25% In	75% Out		63% In	37% Out
206	155	39	116	206	130	76
Internal	2	1	1	10	6	4
Driveway	153	38	115	196	124	72

Average Daily Trip Ends (ADT)		
Lots	Rate	ADT
206	9.52	1,962

As shown in Table 7, in the AM peak hour the Single Family Residential lots are anticipated to generate 153 driveway trips, with 38 driveway trips entering the site, and 115 driveway trips exiting the site. In the PM peak hour the project is anticipated to generate 196 driveway trips; with 124 driveway trips entering the site, and 72 driveway trips exiting the site. The Single Family Residential Lots are anticipated to have an Average Daily Trips (ADT) of 1,962 trips to/from the site per day.

Estate Type Single Family Lots – Single Family Residential

For the 42 Estate Type Single Family lots, Land Use Code #210, Single Family Residential, was used to determine the trips generated by the proposed land use. The trips generated by the Estate type lots land use are shown in Table 8.

Table 8 - Trip Generation Rates for Estate Type Single Family Lots LUC #210 Single Family Residential

Number of Units	AM Peak Hour Trips			PM Peak Hour Trips		
	Vol. @ 0.75 Trips/Unit	Directional Distribution		Vol. @ 1.0 Trips/Unit	Directional Distribution	
		25% In	75% Out		63% In	37% Out
42	32	8	24	42	26	16

Average Daily Trip Ends (ADT)		
Units	Rate	ADT
42	9.52	400

As shown in Table 8, in the AM peak hour the Estate Type Single Family lots are anticipated to generate 32 driveway trips, with 8 trips entering the site, and 24 trips exiting the site. In the PM peak hour the project is anticipated to generate 42 driveway trips; with 26 trips entering the site, and 16 trips exiting the site. The Estate Type Single Family Lots are anticipated to have an Average Daily Trips (ADT) of 400 trips to/from the site per day.

Apartments – Multi-Family Residential

For the 228 unit Multi-Family Apartment Complex, Land Use Code #220, Apartment was used to determine the trips generated by the proposed land use. The trips generated by the apartment land use are shown in Table 9.

Table 9 - Trip Generation Rates for Apartment Units LUC #220 Apartment

Number of Units	AM Peak Hour Trips			PM Peak Hour Trips		
	Vol. @ 0.51 Trips/Unit	Directional Distribution		Vol. @ 0.62 Trips/Unit	Directional Distribution	
		20% In	80% Out		65% In	35% Out
228	117	23	94	142	92	50
Internal	1	0	1	10	6	4
Driveway	116	23	93	132	86	46
Average Daily Trip Ends (ADT)						
Units	Rate	ADT				
228	6.65	1,517				

As shown in Table 7, in the AM peak hour the Apartment Complex is anticipated to generate 116 driveway trips, with 23 driveway trips entering the site, and 93 driveway trips exiting the site. In the PM peak hour the project is anticipated to generate 132 driveway trips; with 86 driveway trips entering the site, and 46 driveway trips exiting the site. The Apartment Complex is expected to have an Average Daily Trips (ADT) of 1,517 trips to/from the site per day.

52 Apartments (Mixed Use) – Multi-Family Residential

For the Multi-Family Apartment Units (Mixed Use) located above the commercial development, Land Use Code #220, Apartment was used to determine the trips generated for the proposed land use. The trips generated by the Apartment (Mixed Use) land use are shown in Table 10.

Table 10 - Trip Generation Rates for LUC #220 Apartment (Mixed Use)

Number of Units	AM Peak Hour Trips			PM Peak Hour Trips		
	Vol. @ 0.51 Trips/Unit	Directional Distribution		Vol. @ 0.62 Trips/Unit	Directional Distribution	
		20% In	80% Out		65% In	35% Out
52	27	5	22	33	21	12
Average Daily Trip Ends (ADT)						
Units	Rate	ADT				
52	6.65	346				

As shown in Table 10, in the AM peak hour the Multi-Family Apartment Units, above the commercial development, are anticipated to generate 27 driveway trips, with 5 trips entering the site, and 22 trips exiting the site. In the PM peak hour the project is anticipated to generate 33 driveway trips; with 21 trips entering the site, and 12 trips exiting the site. These Apartment Units are expected to have an Average Daily Trips (ADT) of 346 trips to/from the site per day.

Commercial

For the 26,400 sf (26.4 KSF) of commercial development Land Use Code #820, Shopping Center was used to determine the trips generated by the proposed land use. The trips generated by the commercial development land use are shown in Table 11.

Table 11 - Trip Generation Rates for LUC #820 Shopping Center

Thousand Square Feet KSF (Max)	AM Peak Hour Trips			PM Peak Hour Trips

Average Daily Trip Ends (ADT)		
KSF	Rate	ADT
26.4	42.7	1,128

PM Pass-by 34%
per ITE Trip handbook Table 5.6

As shown in Table 11, in the AM peak hour the Shopping Center is anticipated to generate 23 new trips, with 14 new trips entering the site, and 9 new trips exiting the site. In the PM peak hour the project is anticipated to generate 51 new trips; with 25 new trips entering the site, and 26 new trips exiting the site. The Commercial Development is anticipated to have an Average Daily Trips (ADT) of 1,128 trips to/from the site per day.

Driveway Trips

The proposed development driveway trips generated on the transportation system are shown in the table below.

Table 12 – Driveway Trips Generation Summary

Land Use Code (LUC)	AM Peak Hour Trips			PM Peak Hour Trips		
	Vol. per LUC	Directional Distribution		Vol. per LUC	Directional Distribution	
		In	Out		In	Out
LUC #230 Townhouses (Cottage Style) (Table 6)	23	4	19	28	19	9

LUC #820 Shopping Center (Table 11)	23	14	9	78	38	40
Total	374	92	282	482	301	181

Average Daily Trip Ends (ADT)		
Land Use Code (LUC)	Rate	ADT
LUC #230 Townhouses (Cottage Style) (Table 6)	-	303
LUC #210 Single Family Residential (Table 7)	-	1,962
LUC #210 SFR (Estate Lots) (Table 8)	-	400
LUC #220 Apartment (Table 9)	-	1,516
LUC #220 Apartment (mixed use)(Table 10)	-	346
LUC #820 Shopping Center (Table 11)	-	1,128
Total	-	5,655

As shown in Table 12, in the AM peak hour the project is anticipated to generate 374 driveway trips, with 92 trips entering the site, and 282 trips exiting the site via the nine access opportunities previously noted. In the PM peak hour the project is anticipated to generate 482 driveway trips; with 301 trips entering the site, and 181 trips exiting the site via the nine access opportunities previously noted. The site is anticipated to have an Average Daily Trips (ADT) of 5,655 trips to/from the site per day, via the 9 access opportunities previously noted.

Pass-by Trips

The pass-by trip, as shown on Table 13, is a trip that is currently on the adjacent roadway and turns into the land use as a matter of convenience on the way to their final destination (work/home). The internal trip is a trip that is generated within the proposed land uses when a vehicle/consumer will stop at more than one place on the site. The proposed development pass-by trips generated on the transportation system are shown in the table below. Please see the map of pass-by trips on Figure 9.

Table 13 – Pass-by Trips Generation Summary

Land Use Code (LUC)	AM Peak Hour Trips			PM Peak Hour Trips		
	Vol. per LUC	Directional Distribution		Vol. per LUC	Directional Distribution	
		In	Out		In	Out
LUC #820 Shopping Center (Table 11)	-	-	-	27	13	14

As shown in Table 13, in the AM peak hour the commercial development is anticipated to generate 8 pass-by trips, with 5 trips entering the site, and 3 trips exiting the site. In the PM peak hour the commercial development is anticipated to generate 27 pass-by trips; with 13 trips entering the site, and 14 trips exiting the site.

Internal Trips

The internal trip generation was established using the methodology set forth in ITE Trip Generation Handbook Chapter 7. The proposed development internal trips generation on the internal road network between the Single Family Residential, Apartments, and Commercial land uses are summarized in the table below.

Table 14 – Internal Trips Generation Summary

Land Use Code (LUC)	AM Peak Hour Trips			PM Peak Hour Trips		
	Vol. per LUC	Directional Distribution		Vol. per LUC	Directional Distribution	
		In	Out		In	Out
LUC #210 Single Family Residential (Table 7)	2	1	1	10	6	4
LUC #220 Apartment (Table 9)	1	0	1	10	6	4
LUC #820 Shopping Center (Table 11)	3	2	1	20	8	12
Total	6	3	3	40	20	20

As shown in Table 14, in the AM peak hour the project is anticipated to generate 6 internal trips, with 3 trips entering the site, and 3 trips exiting the site. In the PM peak hour the project is anticipated to generate 40 internal trips; with 20 trips entering the site, and 20 trips exiting the site.

Trip Distribution Characteristics for the Proposed Project

Considering many factors such as the development surrounding the proposed project, the general commuter traffic in the area, the geography in the vicinity of the site, and the existing transportation facilities in the surrounding area, the following distribution from the proposed project applies:

Cottages Style Single Family (Townhouses)
It is anticipated that 100% of the trips will go to/from the north via Madison Road towards 32nd Avenue. At 32nd Avenue, traffic will follow the existing traffic patterns of the intersection, In the AM peak hour from the intersection of 32nd Avenue.& Pines Road 57% of the trips will be traveling to/from the east, 29% of the trips will be traveling to/from the north, and 14% of the trips will be traveling to/from the west. Please see Figure 7A in the appendix. In the PM peak hour from the intersection of 32nd Avenue & Pines Road 44% of the trips will be traveling to/from the east, 32% of the trips will be traveling to/from the north, and 24% of the trips will be traveling to/from the west. Please see Figure 8A in the appendix.

Estate Type Single Family
It is anticipated that 50% of the trips will go to/from the north on Madison Road towards 32nd Avenue, and 50% of the trips will go to/from the south on Madison Road towards Thorpe Road, then towards Dishman-Mica Road, where 45% of trips go to/from the north, and 5% of trips go to/from the south. Please see Figures 7B and 8B in the appendix.

> At the intersection of Dishman-Mica Road & Bowdish Road In the AM peak hour 5% will go to/from the north 31% will go to/from the west and 9% will go to/from the south. In the PM peak hour 5% will go to/from the north 38% will go to/from the west and 2% will go to/from the south.
>
> At the intersection of 32nd Avenue & Pines Road In the AM peak hour 9% will go to/from the west, 16% will go to/from the north and 25% will go to/from the east. In the PM peak hour 12% will go to/from the west, 16% will go to/from the north and 22% will go to/from the east.

Single Family Residential
It is anticipated that the trips will be split 50/50 with half of the trips going to Madison Road, and half of the trips going to Dishman-Mica Road where 45% go to/from the north and 5% go to/from the south. Please see Figures 7C and 8C in the appendix.

> At the intersection of Dishman-Mica Road & Bowdish Road In the AM peak hour 5% will go to/from the north 31% will go to/from the west and 9% will go to/from the south. In the PM peak hour 5% will go to/from the north 38% will go to/from the west and 2% will go to/from the south.
>
> At the intersection of 32nd Avenue & Pines Road In the AM peak hour 9% will go to/from the west, 16% will go to/from the north and 25% will go to/from the east. In the

PM peak hour 12% will go to/from the west, 16% will go to/from the north and 22% will go to/from the east.

Apartments - Apartments (Mixed Use) –Land uses Commercial

It is anticipated that 100% of the trips will go to/from Dishman-Mica Road, where 5% of trips go to/from the south, and 5% of trips will go east around to Madison Road and 90% of trips go to/from the north, where in the AM peak hour 11% will go to/from the north 61% will go to/from the west and 18% will go to/from the south. In the PM peak hour 10% will go to/from the north 76% will go to/from the west and 4% will go to/from the south. Beyond this distribution trips will follow existing traffic patterns. For Apartments Please see Figures 7D and 8D in the appendix. For Apartments (Mixed Use) please see Figures 7E and 8E in the appendix. For Commercial Please see Figures 7F and 8F in the appendix.

FUTURE YEAR TRAFFIC IMPACT ANALYSIS

Future Year Traffic Impact Analysis
Level of service calculations for the Year 2020 & 2040 conditions assumed that the existing traffic volumes as shown on Figures 3 & 4 experience an increase above the 2015 volumes at the established background rate. Two scenarios were examined for the year 2020 (buildout) analysis, as well as the horizon year 2040 (planning level study). The first scenario assumes that the development has not moved forward and analyzes the scoped intersections with the background growth rate and the background project trips. The second scenario assumes that the development has moved forward to completion and is builtout. The scenario analyzes the scoped intersections with the background growth rate, the background projects, and the project trips. These scenarios will allow a determination to be made of what the future conditions may be with and without the project.

Left Turn lanes on Dishman-Mica Road, Thorpe Road & Madison Road along Project Frontage
Per the request of the City of Spokane Valley we have analyzed the proposed accesses to determine if a left turn is warranted based upon the WSDOT design manual Exhibit 1310-7a. The results are summarized here and the exhibits are shown in the appendix:

Table 15 - Left Turn Analysis at Proposed Project Accesses.

Intersection:	Results
Dishman-Mica Road & Apt. Access	NA – no left turns allowed (RI-RO)
Dishman-Mica Road & Sundown Drive	Plots above the line and warrants left turn lane
Dishman-Mica Road & N. Comm. Access	Plots below the line
Dishman-Mica Road & S. Comm. Access	Plots below the line
Thorpe Road & Comm. Access	Plots below the line
Madison Road & Painted Hills Avenue	Plots below the line
Madison Road & 41st Avenue	Plots below the line
Madison Road & 43rd Avenue	Plots below the line
Madison Road & 44th Avenue	Plots below the line

As shown in the results only the intersection of Dishman-Mica Road & Sundown Drive meets the threshold to consider a left turn storage lane.

Based upon these results and discussions with the developer regarding the developments frontage improvements, we recommend that on Dishman Mica Road a Two-Way-Left-Turn-Lane (TWLTL) be provided to accommodate the proposed access roads and driveways. The TWLTL is proposed to begin north of the Chester Creek Bridge and end before the extension of the project boundary. Additionally based upon the City of Spokane Valleys classification of Madison Road as a collector we recommend that that the developer includes the widening of Madison Road for a future TWLTL. These recommendations are incorporated with the analysis of the intersections.

Study Area Intersections Left and Right turn Warrants

Per the request of the City of Spokane Valley a review of the study intersections was completed for the Year 2020 with and without the project in the AM and PM peak hours. The left and right turn movements of each intersection were screened using a rule of thumb consideration to identify potential turn lane needs. The rule of thumb is a movements that exceeded a volume of 300 vehicles for a left turn movement, and 100 vehicles for a right turn movement. This rule of thumb is only used as an indicator, as the decision to install a turn lane is based upon multiple variables including Intersection Level of Service, Signal Timing, Pedestrian needs, and Movement Queue.

Table 15A Turn Analysis at Study Area Intersections

Intersection	Scenario	Proj. Trips	Mvmt	Existing Condition	Recommendation
32nd Ave. & University Rd.	AM Peak Hour W- & W-O Proj.	8	WB Rt	4-lane Roadway	None
Dishman-Mica Rd & University/Schafer	PM Peak Hour W- & W-O Proj.	0	SB Rt	Existing Right turn Lane	None
Dishman-Mica Rd & Bowdish	PM Peak Hour W- & W-O Proj.	0	EB Rt	No turn lane.	Agency Consideration
16th Ave. & Pines Rd	AM Peak Hour W- & W-O Proj.	23	NB Rt	Slight Flare	See 2020 W-Proj Recommendation
16th Ave. & Pines Rd	PM Peak Hour W- & W-O Proj.	14 0	NB Rt SB Rt	Slight Flare	See 2020 W-Proj Recommendation
32nd Ave. & Pines Rd	AM Peak Hour W- & W-O Proj	56	NB Rt	No turn lane.	See Below
32nd Ave. & State Route 27	AM & PM Peak Hr W- & W-O Proj	0 0	NB Rt	Full 50' Flare	None
32nd Ave. & State Route 27	PM Peak Hour W- & W-O Proj	8	EB Rt	Existing Right turn Lane	None
32nd Ave. & Evergreen Rd	AM & PM Peak Hr W- & W-O Proj	3 13	SB Rt	Existing Right turn Lane	None
32nd Ave. & Sullivan Rd	AM & PM Peak Hr W- & W-O Proj	12 20	SB Rt	Existing Right turn Lane	None

The intersection of Dishman-Mica Road & Bowdish Road eastbound right movement meets the rule of thumb in the Year 2020 both with and without the project. As the project contributes no trips to this movement, the decision to install a right turn lane rests with the City of Spokane.

The Intersection of 16th Avenue & Pines Road northbound and southbound right turn movements meet the rule of thumb in the Year 2020 Both With and without the project, see the year 2020 With the project scenario.

The intersection of 32nd Avenue & Pines Road northbound right turn movement meets the rule of thumb and the project anticipates adding 56 trips to the movement. Therefore considering the installation of a right turn movement; per the intersection level of service analysis the intersection is anticipated to function at Level of Service "C" for both the AM and PM Peak

Hours and With and Without the Project. Additionally for those scenarios the northbound approach Queue does not spillback into the preceding intersection. As the volume occurs only in the AM peak hour when the intersection receives the most amount of pedestrians, that are students, we do not recommend that a right turn lane be installed as the installation would encourage additional Right turn on red movements that would conflict with the pedestrian phase of the signal timing.

At this time we are not making any turn lane proposals at the intersection of 32nd Avenue & Pines Road due to extenuating circumstances associated with traffic operations of the signal and University High School and student safety in the area.

Year 2020 without the Project, with the Background Projects

This scenario assumes that the development has not moved forward and the background projects have been completed. The traffic volumes for this condition include the existing traffic, as shown on Figures 3 & 4 multiplied by the background growth rate, plus the traffic from the original background projects as shown on Figures 5 & 6. Please see Figures 10 & 11 for the traffic volumes used for this scenario. A summary of the level of service results are shown in the following table.

Table 16 - Year 2020 Levels of Service, without the Project, with the Background Projects

Intersection Level of Service - Deficiency Evaluation

There are no deficiencies identified for intersection level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.

Intersection Movement Queue - Deficiency Evaluation for 2020 Without the Project

The queue deficiencies are identified on Table 17 and described as follows; These deficiencies are solely based upon the Background trips (unmitigated) reported within this report. All noted intersections are anticipated to function at acceptable levels of service.
Year 2015 Existing vs. Year 2020 w-o Proj,

16th Avenue & State Route 27

- The EB through approach as reported is expected to go from a queue length of 452 feet to a queue length of 522 feet or an increase of 70 feet. And the reported queue exceeds the available space by 462 feet.
- The WB thru approach as reported is expected to go from a queue length of 260 feet to a queue length of 290 feet or an increase of 30 feet. And the reported queue exceeds the available space by 120 feet.

32nd Avenue & Pines Road

- The EB through approach as reported is expected to go from a queue length of 401 feet to a queue length of 496 feet or an increase of 95 feet. And the reported queue exceeds the available space by 6 feet.

32nd Avenue & State Route 27

- The WB through approach as reported is expected to go from a queue length of 322 feet to a queue length of 399 feet or an increase of 77feet. And the reported queue exceeds the available space by 234 feet.
- The WB left turn approach as reported is expected to go from a queue length of 169 feet to a queue length of 213 feet or an increase of 44 feet. And the reported queue exceeds the available space by 63 feet.

Year 2020 with the Project, with the Background Projects

This scenario assumes that the development has moved forward to completion and the background projects have been completed. The traffic volumes for this condition include the existing traffic, as shown on Figures 10 & 11, plus the project trips as shown on Figures 7 & 8. Please see Figures 12 & 13 for the traffic volumes used for this scenario. A summary of the level of service results are shown in the following table.

Table 18 - Year 2020 Levels of Service, with the Project, with the Background Projects

Intersection Level of Service - Deficiency Evaluation

There is a deficiency identified for intersection level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan, at the intersection of 16th Avenue & Pines Road. The deficiency in LOS can be remedied by reducing conflicts at the intersection by removing the southbound slip ramp approach to the intersection and redirecting the displaced trips to the SB right movement of the intersection of 16th Avenue & State Route 27. We therefore recommend that the project remove the SB slip ramp approach of the intersection.

Intersection Movement Queue - Deficiency Evaluation for 2020 with the project

The queue deficiencies are identified on Table 19 and described as follows; These deficiencies are solely based upon the proposed project as documented within this report. All noted intersections are anticipated to function at acceptable levels of service, except for the intersection of 16th Avenue & Pines Road

.

Year 2020 w-o Proj. vs. Year 2020 w- Proj.,
16th Avenue & State Route 27

- The EB through approach as reported is expected to go from a queue length of 522 feet to a queue length of 547 feet or an increase of 25 feet. And the reported queue exceeds the available space by 487 feet.
- The WB thru approach as reported is expected to go from a queue length of 290 feet to a queue length of 299 feet or an increase of 9 feet. And the reported queue exceeds the available space by 129 feet.

32nd Avenue & Pines Road

- The EB through approach as reported is expected to go from a queue length of 496 feet to a queue length of 617 feet or an increase of 121 feet. And the reported queue exceeds the available space by 127 feet.

32nd Avenue & State Route 27

- The WB through approach as reported is expected to go from a queue length of 399 feet to a queue length of 457 feet or an increase of 58 feet. And the reported queue exceeds the available space by 290 feet.
- The WB left turn approach as reported is expected to go from a queue length of 213 feet to a queue length of 223 feet or an increase of 10 feet. And the reported queue exceeds the available space by 73 feet.

Horizon Year Traffic Impact Analysis (Buildout + 20 Years)
The Horizon Year analysis is not a requirement of the project per the COV street standards as the project mitigation does not include a signal or roundabout to meet level of service standards, but is provided as a planning level analysis.

Planning Level Considerations
As this section is reserved to consider planning level operations of the transportation system it is appropriate to consider the land uses of this area. As previously noted the proposed property is listed and zoned as low density residential, as are most of the remaining undeveloped properties within the basin both in the City of Spokane Valley and Spokane. It has been shown that from a traffic perspective that a concentration of like land uses can cause an in balance in the directional travel of the road system. This should be considered as development continues in the future.

When understanding the strain that intersections endure under the daily loads, it is the responsibility of the City planners to consider the directional load that land uses can place on an intersection and work to provide that balance. Otherwise facilities will need to be overbuilt to accommodate high directional imbalance.

Intersection Level of Service

Level of service calculations for the Year 2040 conditions assumed that the existing traffic volumes as shown on Figure 3 experience an increase above the 2015 volumes at the established background rate. Two scenarios were examined for the year 2040 analysis. The first scenario assumes that the development has not moved forward and analyzes the scoped intersections with the background growth rate and the background project trips. The second scenario assumes the same but adds the project trips.

Horizon Year 2040 without the Project, with the Background Projects (Planning Level)

This scenario assumes that the development has not moved forward and the background projects have been completed. The traffic volumes for this condition include the existing traffic, as shown on Figures 3 & 4 multiplied by the background growth rate, plus the traffic from the original background projects as shown on Figures 5 & 6. Please see Figures 14 & 15 for the traffic volumes used for this scenario. A summary of the level of service results are shown in the following table.

Table 20 - Year 2040 Levels of Service, without the Project, with the Background Projects

32nd Ave & Sullivan Rd	U	13.1	B	15.5	C

Intersection Level of Service - Deficiency Evaluation

The only deficiencies identified for intersection level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan is anticipated to be at the intersection 16th Avenue & Pines Road even with the proposed removal of the SB approach by the project at buildout.

Based upon this analysis we recommend that the City of Spokane Valley and WSDOT work on a permanent solution to these closely spaced intersections. We would like the agencies to consider a two lane roundabout with a following traffic circle at this location. The intersection of 16th Avenue & Pines Road being a single lane traffic circle with three approaches, and the intersection of 16th Avenue & State Route 27 being a 2 lane roundabout with four approaches.

Intersection Movement Queue - Deficiency Evaluation for 2040 without the Project

The queue deficiencies are identified on Table 21 and described as follows; These deficiencies are solely based upon the Background trips (unmitigated) reported within this report. And have assumed that there is no major change in the dynamics of the existing transportation system over a 25 year period. It is noted that most intersections are anticipated to function at acceptable levels of service.

Year 2040 w-o Proj vs. Year 2020 w-o Proj,

16th Avenue & Pines Road

- The SB through approach as reported is expected to go from a queue length of 207 ft. to a queue length of 530 feet or an increase of 323 feet. And the reported queue exceeds the available space by 230 feet.

16th Avenue & State Route 27

- The EB through approach as reported is expected to go from a queue length of 522 feet to a queue length of 817 feet or an increase of 295 feet. And the reported queue exceeds the available space by 757 feet.
- The WB thru approach as reported is expected to go from a queue length of 290 feet to a queue length of 406 feet or an increase of 116 feet. And the reported queue exceeds the available space by 236 feet.

32nd Avenue & Pines Road

- The EB through approach as reported is expected to go from a queue length of 617 feet to a queue length of 729 feet or an increase of 112 feet. And the reported queue exceeds the available space by 239 feet.

32nd Avenue & State Route 27

- The WB through approach as reported is expected to go from a queue length of 457 feet to a queue length of 644 feet or an increase of 187 feet. And the reported queue exceeds the available space by 479 feet.
- The WB left turn approach as reported is expected to go from a queue length of 213 feet to a queue length of 299 feet or an increase of 86 feet. And the reported queue exceeds the available space by 149 feet.
- The NB left turn approach as reported is expected to go from a queue length of 168 feet to a queue length of 223 feet or an increase of 55 feet. And the reported queue exceeds the available space by 23 feet.

Intersection Level of Service - Deficiency Evaluation

The only deficiencies identified for intersection level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan is anticipated to be at the intersection 16th Avenue & Pines Road even with the proposed removal of the SB approach by the project at buildout.

Based upon this analysis we recommend that the City of Spokane Valley and WSDOT work on a permanent solution to these closely spaced intersections. We would like the agencies to consider a two lane roundabout with a following traffic circle at this location. The intersection of 16th Avenue & Pines Road being a single lane traffic circle with three approaches, and the intersection of 16th Avenue & State Route 27 being a 2 lane roundabout with four approaches.

Intersection Movement Queue - Deficiency Evaluation for 2040 with the Project

The queue deficiencies are identified on Table 23 and described as follows; these deficiencies are based upon the project trips plus the background trips and growth rate. And have assumed that there is no major change in the dynamics of the existing transportation system over a 25 year period. It is noted that most intersections are anticipated to function at acceptable levels of service.

Year 2040 w-Proj vs. Year 2040 w-o Proj,

16th Avenue & Pines Road

- The SB through approach as reported is expected to go from a queue length of 530 ft. to a queue length of 630 feet or an increase of 100 feet. And the reported queue exceeds the available space by 330 feet.

16th Avenue & State Route 27

- The EB through approach as reported is expected to go from a queue length of 547 feet to a queue length of 853 feet or an increase of 306 feet. And the reported queue exceeds the available space by 793 feet.
- The WB thru approach as reported is expected to go from a queue length of 299 feet to a queue length of 420 feet or an increase of 121 feet. And the reported queue exceeds the available space by 250 feet.

32nd Avenue & Pines Road

- The EB through approach as reported is expected to go from a queue length of 617 feet to a queue length of 855 feet or an increase of 238 feet. And the reported queue exceeds the available space by 127 feet.

32nd Avenue & State Route 27

- The WB through approach as reported is expected to go from a queue length of 457 feet to a queue length of 744 feet or an increase of 287 feet. And the reported queue exceeds the available space by 579 feet.
- The WB left turn approach as reported is expected to go from a queue length of 233 feet to a queue length of 314 feet or an increase of 81 feet. And the reported queue exceeds the available space by 164 feet.
- The NB left turn approach as reported is expected to go from a queue length of 223 feet to a queue length of 240 feet or an increase of 7 feet. And the reported queue exceeds the available space by 40 feet.

Conclusions

Based upon the analysis, field observations, assumptions, methodologies and results which are provided in the body of this report, it is concluded that the development of the proposed project will generate new trips on the existing transportation system and that those trips while affecting level of service will generally not degrade LOS below concurrency levels, except at the intersection of 16th Avenue & Pines Road. Additionally the queue deficiencies identified, carry through the scenarios from the existing condition to the future conditions, and the project only adds to an already existing condition. This conclusion was reached and has been documented within the body of this report.

Existing Condition

- There are no Level of Service deficiencies identified for level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- There are three queue deficiencies identified at three of the scoped intersections that have acceptable levels of service, there is no public improvement project identified to mitigate these discrepancies.
    - 16th Avenue & State Route 27, EB Thru, WB Thru
    - 32nd Avenue & State Route 27, WB Thru

Year 2020, without project, with background projects

- There are no Level of Service deficiencies caused by the background projects and growth rate, for level of service as understand Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- There are five queue deficiencies identified at three intersections with acceptable levels of service. These deficiencies were identified as the result of the background growth rate and the background projects as identified at scoping. There is no public improvement project identified to mitigate these discrepancies. Please see the analysis for the details of the found discrepancies.
    - 16th Avenue & State Route 27, EB Thru, WB Thru
    - 32nd Avenue & Pines Road, EB Thru
    - 32nd Avenue & State Route 27, WB Thru, WB Left Turn

Year 2020, with project, with background projects

- There is a Level of Service deficiency identified at the intersection of 16th Avenue & Pines Road, for level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- The Level of Service deficiency identified at the intersection of 16th Avenue & Pines Road, originally caused by the background trips and worsened by this project, can be brought back to an acceptable level of service by removing the southbound approach to

the intersection and redirecting trips through the SB right turn movement of the intersection of 16th Avenue & State Route 27 This project proposes to remedy this anticipated deficiency.
    - The cost to remedy the intersection deficiency is estimated at $10,000.
- There are the same five queue deficiencies previously identified at three intersections with two of those intersections operating at acceptable levels of service. These deficiencies were the result of the background growth rate and the background projects as identified within this study and are only incrementally worsened or kept the same by this project. There is no public improvement project identified to mitigate these discrepancies. Please see the analysis for the details of the found discrepancies.
    - 16th Avenue & State Route 27, EB Thru, WB Thru
    - 32nd Avenue & Pines Road, EB Thru
    - 32nd Avenue & State Route 27, WB Thru, WB Left Turn

Horizon Year 2040, without project, with background projects (Planning Level)

- There are planning level, Levels of Service deficiencies identified at the intersections of; 16th Avenue & Pines Road, for level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- The Level of Service deficiency at the intersection of 16th Avenue & Pines Road can be improved by the agencies considering a public improvement project that would redefine the layout of the closely spaced intersections. We have included for the agency consideration, a plan that utilizes a roundabout and a traffic circle.
- There are seven queue deficiencies identified, and are the extensions of known queue deficiencies or are the results of deficiencies in Levels of Service.
    - 16th Avenue & Pines Road, SB Thru
    - 16th Avenue & State Route 27, EB Thru, WB Thru
    - 32nd Avenue & Pines Road, EB Thru
    - 32nd Avenue & State Route 27, WB Thru, WB left Turn, NB Left turn

Horizon Year 2040, with project, with background projects (Planning Level)

- There are planning level, Levels of Service deficiencies identified at the intersections of 16th Avenue & Pines Road, for level of service as described in Chapter 3 of the Spokane Valley Street Standards, and the Level of Service Table 4.3 of the City of Spokane Valley Comprehensive Plan.
- As previously stated the Level of Service deficiency at the intersection of 16th Avenue & Pines Road can be improved by the agencies considering a public improvement project that would redefine the layout of the closely spaced intersections. We have included for the agency consideration, a plan that utilizes a roundabout and a traffic circle.
- There are queue deficiencies identified, and are the extension of known queue deficiencies or are the result of deficiencies in Levels of Service.
    - 16th Avenue & Pines Road, SB Thru
    - 16th Avenue & State Route 27, EB Thru, WB Thru
    - 32nd Avenue & Pines Road, EB Thru
    - 32nd Avenue & State Route 27, WB Thru, WB left Turn, NB Left turn

Recommendations

Based upon the conclusions within this study the proposed project is recommended to provide frontage improvements to Dishman-Mica Road, Thorpe Road, and Madison Road per the City of Spokane Valley development process and add a two-way-left-turn-lane north of the Chester Creek Bridge to the property boundary. We also recommend that when warranted prior to buildout that the project removes the southbound approach to the intersection of 16th Avenue & Pines Road.

At this time we are not making any turn lane proposals at the intersection of 32nd Avenue & Pines Road due to extenuating circumstances associated with traffic operations of the signal and University High School and student safety in the area.

TECHNICAL APPENDIX

LEVEL OF SERVICE METHODS AND CRITERIA

Unsignalized Intersection
Level of Service Criteria

Level of Service	Delay Range (sec)	Expected Delay to Minor Street Traffic
A	≤ 10	Little to No Delay
B	> 10 and ≤ 15	Short Traffic Delays
C	>15 and ≤ 25	Average Traffic Delays
D	>25 and ≤ 35	Long Traffic Delays
E	> 35 and ≤ 50	Very Long Traffic Delays
F	> 50	Stop-and-Go Condition Delays Generally Longer than Acceptable

Unsignalized Intersections
Level of Service Descriptions

LOS	General Description
A	• Nearly all drivers find freedom of operation. • Very seldom is there more than one vehicle in the queue.
B	• Some drivers begin to consider the delay an inconvenience • Occasionally there is more than one vehicle in the queue.
C	• Many times there is more than one vehicle in the queue. • Most drivers feel restricted, but not objectionably so.
D	• Often there is more than one vehicle in the queue. • Drivers feel quite restricted.
E	• Represents conditions in which the demand is near or equal to the probable maximum number of vehicles that can be accommodated by the movement. • There is almost always more than one vehicle in the queue. • Drivers find the delays approaching intolerable levels.
F	• Forced flow. • Represents an intersection failure condition that is caused by geometric and/or operational constraints external to the intersection

Signalized Intersection
Level of Service Criteria

Level of Service	Delay Range (sec)
A	≤ 10
B	> 10 and ≤ 20
C	>20 and ≤ 35
D	>35 and ≤ 55
E	> 55 and ≤ 80
F	> 80

Signalized Intersections
Level of Service Descriptions

LOS	General Description
A	• Very low delay at intersection. • All signal cycles clear. • No vehicles wait through more than one signal cycle.
B	• Operating speeds beginning to be affected by other traffic. • Short traffic delays at intersections. • Higher average intersections delays resulting from more vehicles stopping.
C	• Operating speeds and maneuverability closely controlled by other traffic. • Higher delays at intersections than for LOS B due to a significant number of vehicles stopping. • Not all signal cycles clear the waiting vehicles.
D	• Tolerable operating speeds, but long traffic delays occur at intersections • The influence of congestion is noticeable. • Many vehicles stop and the proportion of vehicles not stopping declines. • The number of signal cycle failures, for which vehicles must wait through more than one signal cycle are noticeable.
E	• Speeds are restricted, very long traffic delays are experienced and traffic volumes are near capacity. • Traffic flow is unstable so that any interruption, no matter how minor, will cause queues to form and service to deteriorate. • Traffic signal cycle failures are frequent occurrences.
F	• Extreme delays resulting in long queues which may interfere with other traffic movements • Stoppages of long duration and speeds may drop to zero. • There may be frequent signal failures. • Vehicle arrival rates are greater than capacity. • Considered unacceptable by most drivers.

The trip generation characteristics of the site are expected to be represented by the characteristics found in the Institute of Transportation Engineers Manual, *Trip Generation, 7th Edition* for Single-Family Detached Housing, Land Use Category 210. These characteristics are summarized on Table 1.

Table 1 - Trip Generation Characteristics for Paxton Addition

Average Daily Trip Ends (ADT)		
Unit	Rate	Total ADT
14	11.66	163

This site is served by one driveway to Madison Road. Nearly all destinations from the site will be north. However, with the proximity of Dishman-Mica Road, trips headed northwest will go to Dishman-Mica Road and then proceed northwest on that street. Trips destined to the north or northeast are expected to take Madison Road, and some will turn east on 32nd Avenue.

Overall distribution is expected to be 60% north on Madison Road, and 40% to Dishman-Mica. Of the northbound traffic on Madison, 25% will turn east on 32nd Avenue, while the remaining 35% will continue north on Pines Road. These percentages are percentages of the total. Figure 3, Trip Distribution, shows the anticipated distribution of traffic to/from this site.

Based upon this distribution, the site will add four vehicles to Dishman-Mica, and seven to Madison Road, three of which will use 32nd Avenue and four use Pines Road north of 32nd Avenue during the AM peak hour. During the PM peak hour, the site will add six vehicles to Dishman-Mica, five to 32nd Avenue and three to Pines Road north of 32nd Avenue although in the opposite direction.

The traffic from this project will have no identifiable impacts to the surrounding transportation system. The intersection of Pines Road / 32nd Avenue was recently signalized, is generally functioning at high levels of service and can easily accommodate additional traffic volume. The intersection of Thorpe Road / Dishman-

IV. Trip Generation

The trip generation characteristics of the site are expected to be represented by the characteristics found in the Institute of Transportation Engineers Manual, *Trip Generation, 7th Edition* for Single-Family Detached Housing, Land Use Category 210. Local data is available for average daily traffic from a report prepared by NuStats on behalf of SRTC, and for non-incorporated parts of Spokane County, the rate is 11.55 trips per household per day. The trip making characteristics for the site are summarized on Table 1.

Table 1 - Trip Generation Characteristics for The Creek at Chester

Units	AM Peak Hour			PM Peak Hour			ADT
	Vol @ 0.77 Trips per Unit	Directional Distribution		Vol @ 1.02 Trips per Unit	Directional Distribution		Vol @ 11.55 Trips per Unit
		26% In	74% Out		64% In	36% Out	
49	38	10	28	50	32	18	566

Based on the information on Table 1 the site will generate 38 new trips during the a.m. peak hour and 50 new trips in the p.m. peak hour. During an average day, the site will generate 566 trips.

V. Trip Distribution

Overall distribution from the site is expected to be 40% west on Thorpe Road, and 60% north on Madison Road as shown on Figure 5, Trip Distribution. This is substantially different than the distribution contained in the trip distribution letter prepared for this project. However, the field counts at the Thorpe Road / Madison Road intersection indicate that this distribution is more reflective of residential distribution in the area. It is likely that more trips from the area have ends within the Valley and closer to the site than anticipated in the trip distribution letter. This discrepancy was brought to Spokane County and Spokane Valley personnel's attention as soon as it was discovered.

Note that all of the traffic generated by the project is assumed to use the Thorpe Road / Madison Road intersection. A small amount of traffic may go south from the site. However, this is expected to be a very small amount, and was therefore neglected, in part to ensure that the Thorpe Road / Madison Road intersection is functioning at acceptable levels of service. The traffic on Thorpe Road is expected to use Dishman-Mica Road to/from the north, with very limited traffic using Dishman-Mica Road to the south. The site generated traffic volumes are shown on the lower left corner of Figure 3 for the a.m. peak hour and Figure 4 for the p.m. peak hour.

VI. Level of Service Analysis

Intersection levels of service are expressed by using letter designations from A to F, whereby LOS A represents the best operating conditions and LOS F the worst (saturated flow or over-capacity) conditions. The levels are designed to determine how well an intersection is functioning with respect to variables such as traffic flow and delay.

Project Impacts

This section documents the impacts which the proposed project would have on the transportation network in the surrounding vicinity. First, trips to be generated by the proposed project are estimated and assigned to the transportation network. With-project levels of service at identified study intersections are evaluated and compared to the baseline condition and local agency standards. Any potential traffic safety impacts and transit and non-motorized impacts are discussed.

Trip Generation

Weekday PM peak hour trip generation for the proposed project was calculated based on trip rates published in the Institute of Transportation Engineer's *Trip Generation Manual* (9th Edition, 2012). The trip generation rates are based on hundreds of studies for different land uses. For this study, the apartments land use (#220) was study with the regression equation used based on the size of the development and recommendations in the *Trip Generation Handbook* (ITE, 2nd Edition, 2004).

The resulting trip generation estimate for the proposed development during the average weekday PM peak hour is shown in Table 3. As shown, the proposed residential development is anticipated to generate 90 net new project trips (59 inbound trips and 31 outbound trips) during the weekday PM peak hour.

Table 3. Weekday PM Peak Hour Trip Generation Summary

			Net New Project Trips[2]		
Land Use	**Size**	**Rate[1]**	**In**	**Out**	**Total**
Apartments (LU 220)	132 DU	eqn	59	31	90

1. Rate derived from equation provided for LU 220 within the ITE *Trip Generation Manual*, 9th Edition.
2. In/out percentages based on ITE *Trip Generation Manual*, 9th Edition.

As shown in Table 3, the proposed residential development is anticipated to generate 90 vehicle trips during the weekday PM peak hour. Of these trips, it is estimated that 59 will be oriented towards the site while 31 leave the site during the weekday PM peak hour.

Trip Distribution and Assignment

The distribution of project traffic is based on a review of local travel patterns and coordination with Spokane Valley, Spokane County, and WSDOT staff. Based on the trip distribution patterns shown in Figure 5, weekday PM peak-hour project traffic was assigned to each of the study intersections as shown in Figure 6.

The project traffic volumes were added to the future baseline 2017 traffic volumes to form the basis of the with-project analysis. Figure 7 shows the weekday PM peak hour with-project traffic volumes. The future with-project traffic volumes and project share are summarized in Table 4.

Intersection Summary

Description: Changed City controller phase to E-W NEMA phase

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
